New micros: 'Too little too late'

Commodore has reacted with derision to plans by 15 Japanese computer makers to set a software-compatible standard. Marketing boss John Baxter said: "How can you set a standard when, by the end of the year, we will have outsold them by 10 to one?"

"It's too little too late. If they had tried in 1981 I think they would have had a tremendous impact. But now we and Sinclair have sold between us 10m machines. "There's no possibility of us adopting the MSX standard!"

Computers were not like video or audio where a common format worked — new computers needed enhanced languages to take advantage of new developments.

MSX assumed computers did

SPECIAL REPORT

MSX: What it means to you

High street chains will be selling the first wave of Japanese MSX standard computers by September. Prices are expected to be around £200 for 32K models with 64K versions also available

And the makers predict they will capture 15 per cent of pre-Christmas sales — rising to one third of the UK market next year.

With new standard Japanese micros due here in three months, Paul Liptrot presents the first full report

The first MSX computers to go on sale in the UK. Clockwise from top left: Hitachi, Teleton, Sanyo, Mitsubishi, Sony, Toshiba. Centre: Canon. Missing from picture: JVC

MSX means that software and peripherals for one micro will also work on others using the MSX standard.

And, although designed for home use, when MS-DOS is added later for disc drives, files — but not programs — from 16-bit computers like the IBM PC can be used on MSX micros.

Microsoft, which wrote the industry standard BASIC, spent 14 months developing MSX for 15 Japanese manufacturers, using the eight-bit Z80A processor. MSX computers have been on sale in Japan for several months.

But won't MSX hold back development? David Fraser, general manager of Microsoft, compared home computers with records and video and said: "Without a broad standard development has gone on ad hoc and in different directions. It's difficult to develop software for a moving target."

It was very expensive for software houses to write for several standards; now they could start being more creative.

He said: "Sinclair will not follow any standard. He produces low-cost products which are not 'me-too' but 'me-first'. We are talking to Commodore on various things, from MSX to MS-DOS."

Many leading UK software houses are planning MSX products. They were given a secret preview several weeks ago with the opportunity of having pre-launch models, provided they signed non-disclosure agreements.

Among them is Psion, Sinclair specialists with 3m packages sold, which plans to have software out at the same time as the new computers.

Chairman and managing director David Potter said: "I think that, because of the marketing ability of the Japanese, there's no question that they will have a substantial market share. That's not to say they will be dominant, but they will be a major force."

UK and US makers could reply to MSX, and claims that it would stifle development, by bringing out advanced computers like the QL and Apple's Mackintosh.

Psion developed the QL software, but Dr Potter said the QL was in a different league from MSX machines, particularly because of its greater power.

Lasky's chief executive, Peter Klein, said he hoped British, Euro-

pean and US home micro makers would adopt MSX. Compatibility meant stores could stock a wide range of add-ons and software without today's unacceptable risks and stock costs.

As well as a disc-based MSX-BASIC interpreter, Microsoft is also working on FORTRAN, BASIC, COBOL and Pascal compilers plus an MSX version of the Multiplan spreadsheet.

This is the minimum agreed MSX specification:

Processor: Zilog Z80A or equivalent, running at just over 3.579 MHz. **Video display:** Texas Instruments 9918A or equivalent. **Interface:** Intel i-8255 or equivalent.

Memory: 32K ROM. Minimum of 8K RAM, expandable through bank switching to a maximum of 1024K.

Display: 256 x 192 high resolution, 40 x 24 text with 16 colours.

Sound: three voices, each with a range of eight octaves, with a fourth noise channel available. Each may be modulated using one of 10 envelope waveforms. Sound generator is General Instruments' AY-3-8910 (as used by Oric) or equivalent.

Cassette interface: FSK modulation, 1200 or 2400 baud.

Input/output: one joystick port, cartridge port, expansion bus.

Standardised optional extensions: 80-column text screen, clock, RS-232 interface, floppy disc, printer.

Pop quiz*From front page*

Beatles to Boy George. An unusual feature of this game is that a donation is given to the Stuart Henry Multiple Sclerosis Society Research Fund for every copy sold.

David Gordon, Bellflower director, said: "This game aims to give kids and their reasonably young parents an equal chance. The proportion of contemporary music to older sounds is about 2:1. We ask more specific questions about music of the 80s, but more general, well-known questions on the the 60s."

There are six rounds and the questions increase in difficulty as you progress. The questions are chosen at random so the chances are that you will never play the same game twice. The computer selects one of nine master questions, each in turn with 14 subquestions.

At the beginning of each round the computer composes a short tune in the scale of C. Each time you answer a question correctly you can guess a note. This part is like a musical hangman game. If you guess correctly you get 10 bonus points. If not, 10 points are deducted. As the game goes on the tunes get harder and you must complete the tune before your bonus points run out. You don't have to know music, but it is an advantage.

Mr Gordon said: "After we saw the documentary on Stuart Henry on Channel 4, my partner and I wanted to raise money for sufferers of multiple sclerosis. We are giving our writer's royalties to the Multiple Sclerosis Society and Stuart is making a practical contribution. He is promoting the game on Radio Luxembourg and starting a regular quiz at the weekend when he will give away copies of the game as prizes."

"W. H. Smith is also helping the fund by accepting a lower discount than normal on its first order of the game," he continued.

"Multiple sclerosis is the most common organic disease of the central nervous system," Mr Gordon said, "In Britain 50,000 people suffer from the disease, which, although not terminal, can be debilitating. More than half of the sufferers show no symptoms, but others may be incapacitated and some, like Stuart Henry, are confined to wheelchairs. Stuart Henry is one of the comparatively lucky ones in that he still works, but others are forced to completely change their way of life.

"However, although we are supporting the fund, we don't intend that people should buy our game purely from charitable motives. We want them to buy it and enjoy it because it's a great game."

Bellflower, 6 Rosewood Ave, Greenford, Middx

From front page

not move forward. It was already out of date and had not even set a standard in the maker's home country.

He believed that sales of the new Amstrad computers alone would be greater than six or seven of the Japanese manufacturers put together.

And Commodore had sold more in a year in Italy alone than the MSX micros would sell in the whole of Europe in the same time.

As an example of languages moving on, he mentioned Commodore's next home computer, the 264, and its BASIC Four-Plus which, he said, had all the features of BBC BASIC and more.

Sinclair Research said it also had no plans to adopt the MSX standard.

- Compu-Net, a network for Commodore 64 users offering services like home shopping and telesoftware, is due to be launched next month. Hard-wired modems, costing about £100, will include the first years subscription, usually £20. Run by an independent company, it will at first be exclusive to the 64 and the new Commodore computers. But then it will be offered to users of other micros.

Turn to page 5 for a full report on the new MSX computers

Briefly

Two new programs from PSS: Bath Time (£7.95) and Les Flics (£6.95), for CBM 64 and 48K Spectrum, respectively. Bath Time is promoted as "true family entertainment, guaranteed to leave you feeling warm and glowing." You must protect a swan and a fish cohabitating in your bath. Keep the water level just right for their comfort — but watch out for the elephant and little boy. Les Flics is a spin-off from the Pink Panther: you must collect items and search for a priceless gemstone, while avoiding the gendarmes.

PSS, 452 Stoney Stanton Rd, Coventry CV6 5DG

Your micro, me Jane

No relation to Tarzan, a new program called Jane is designed to make computer use a bit easier. It uses universally-understood symbols and pictures instead of commands and instructions.

The program incorporates the use of a mouse, allowing users to bypass the keyboard except when entering data. The Jane packages, which run on the Commodore 64 and the Apple II family, consist of three applications: a list manager, a spreadsheet and a word processor.

And no, I've no idea why they call it Jane. You can find out for yourself by writing to Arktronics, 113 South Fourth Avenue, Ann Arbor, Michigan 48104. (313) 769-7253.

Dinosaurs is a new educational program to teach pre-schoolers recognition skills needed for matching, sorting, and counting while also getting them used to working with a computer. The same firm has debuted another new program called Lucky's Magic Hat which is an educational program designed to aid in the development of reading, memory, and logical thinking skills. These programs are developed by Advanced Ideas Inc., 2550 Ninth Street, Suite 104, Berkeley, California 94710. (415) 526-9100.

A series of computer games with girls in mind has been brought out by Addison-Wesley publishers. In the series there are four games (all non-violent) by Rhiannon. For more information, contact Addison-Wesley, General Books Division, Reading, Massachusetts 01867. (167) 944-3700.

The Atari Learning Systems Group has just released AtariLab which converts popular home computers into an electronics lab. The starter set comes with a temperature module, interface, probes, and sensors. The packages (which come in versions to run on Ataris and other computers) help users to learn scientific theories through hands-on applications and analysis. Contact Atari Inc., 1265 Borregas Avenue, P.O. Box 417, Sunnyvale, California 94086. (408) 745-5312.

In yet another new product release, Human Engineered Software (HES) has announced a product called Turtle Toyland Jr. Designed for children aged six and up, the program's aim is to make computers and computer concepts easier to understand. At the moment, HES claims to be the largest third-party vendor of software and peripheral devices for the Commodore line. For more information, and a very good catalogue, write HES, 150 North Hill Drive, Brisbane, California 94005. (415) 468-4111.

A new letter-quality printer for the Commodore line has just been announced by Cardo. The firm already markets a line of Commodore accessories. Called the LQ/1, the unit has built-in connections that will interface with all Commodore computers. It will also work with the IBM PC and PCjr., and other personal computers. The unit features standard friction-feed (platen-feed for single sheets) and offers optional forms-tractor feed, as well as interchangeable daisy wheels. You can contact Cardo Inc. at 313 Mathewson, Wichita, Kansas 67214. (316) 267-3807.

That's it for this week. See you next week. Same column, same newstand!

Bud Izen
Fairfield, California

Little Brothers should be seen but not heard.

**NOW ONLY
£159.95
inc.VAT.**

REGULAR, CONDENSED, OR EXTENDED FACES.

CUT SHEET A4 OR ROLL PAPER.

BATTERY OR MAINS OPERATED.

A maxim which eloquently describes the Brother HR-5.

Less than a foot across, it's nonetheless loaded with features.

The little printer that's low on decibels.

There's one thing the HR-5 won't give you. Earache.

For the annoying 'clickety clack' many printers produce is mercifully absent from the HR-5.

Quietly efficient, it delivers high definition dot matrix text over 80 columns at 30 characters per second (maximum).

Text or graphics with ease.

The HR-5 also has something of an artistic bent. Being capable of producing uni-directional graphics and chart images together with bi-directional text. What's more it will hone down characters into a condensed face, or extend them for added emphasis.

At home with home computers.

Incorporating either a Centronics parallel or

RS-232C interface, the HR-5 is compatible with BBC, Spectrum, Oric, Dragon, Atari and most other home computers and popular software.

Perfectly portable, the battery or mains operated HR-5 weighs less than 4 lbs, and has a starting price of only £159.95 (inc. VAT).

Which is really something to shout about.

PLEASE SEND ME MORE DETAILS OF THE REMARKABLE BROTHER HR-5 PRINTER.

Splatter Bug by David Thomas

What could be more homely than a game based on your kitchen sink?

Something tells us David Thomas has been watching too many TV commercials about those invidious germs which lurk in the pipes. In this game you take on the part of Barry Bleach and you must kill 99 per cent of all known germs.

How it works

- 10-99 set up GOSUBs, variables, RUN graphics
- 100-499 draw screen
- 500-1000 main routine
- 1001-1999 fire routine
- 2000-2999 move Bertie and drop food
- 3000-3999 spider
- 4000-4999 fire back
- 5000-5999 death, hi-score, hi-score chart
- 6000-6999 centipede
- 7000-7999 fill sink, random cruise missile
- 8000-8999 start routine, scores, hi-score, keys
- 9000-9997 graphics
- 9998-9999 save

Bertie Bug is a nasty specimen. Not only does he leave food around for you to clear away, but he also throws fleas at you! Pristine hygiene is your aim, so you must do away with him.

Variables
A horiz. position of Barry
CE horiz. position of Cedric.
ME horiz. position of Bertie
Score lives
Hi-score highest score
Tap amount of times tap can be turned on
Caterpillar whether caterpillar is out
Meanie whether Bertie is out
Spider vertical position of spider

Cedric Centipede is another antagonistic force. He is so intent on destroying you that he seems to have over-reacted — he fires cruise missiles at you (surely slightly out of proportion with the size of your battlefield?)

Watch out for these cruise missiles, as they're very unpredictable and can be set off at random. As if all this wasn't enough to wear you out, Sam Spider rises and falls on his thread and he too can bring you to an untimely end.

Your weaponry against this angry mob is bleach blasts, and you must hit your target square on the head. One extra resource you can rely on is turning on the tap to flush them all away down the sink. Go easy, as you can only do this three times.

SPECTRUM PROGRAMS

Snakes and Ladders by Andrew Bird

You've heard it said that old jokes are the best jokes — well, we think that old games are the best games.

How it works

- 4 set up variables
- 5-200 draw board
- 300-350 draw ladders
- 400-440 draw snakes
- 500-580 set up array of co-ordinates and print numbers in each square
- 600-640 main loop detecting whose go and taking appropriate action
- 700-800 end of game routine
- 1000-1500 player 1's movements and positions
- 2000-2500 player 2's movements and positions
- 3000-3010 switch for dice routine
- 4000-4900 cup shake routine
- 5000-5006 random dice selector
- 7000-7010 up ladder and down snake sound effects
- 8000-8230 introduction and instructions
- 9000-9100 graphics

Here's a game which will be familiar to everyone. Remember playing this with a board, counter and dice? Now you can sit at your Spectrum

```

and play. No dice or counters to lose, no board to reduce to tatters. You can even play against your trusty micro, if your friends aren't at hand.

No need to explain the rules since this is such an old favourite. Watch out for the slithery snakes which will make you slide to the depths, and aim for the ladders as they will pave your way to the top.

Experience life's ups and down as you play one of those oldies but goodies.

Variables

- i1,i2 INK colour for printing over counter
- t,tt which part of x,y arrays
- i\$ introduction
- player (1 or 2) whose go
- Comp (0 or 1) detects if computer is playing
- Dim x, Dim y array of positions on screen
- dice number of moves after dice throw
- r computer's random dice selector
- f,n,w,g used in loops to set up screen etc

When typing in Spectrum programs, capital letters in PRINT statements should, unless part of text, be entered in GRAPHICS mode.

GENESIS II

* the adventure game that understands plain English!
The colony ship Genesis II has been hijacked by space pirates - and you're the only crewman left! Only you can save the cargo - an entire forest, full of animals, destined to populate a new world. This exciting adventure game has a vocabulary of nearly 300 words, avoiding that frustrating search for the precise word command.

- ★ Nearly 100 different locations
- ★ Over 60 objects ★ 100% machine code
- ★ Over 500 possible actions

* For 48K Spectrum
£6.95

* Just part of Mikro-Gen's great range - look out for Paradroids, Mad Martha II, Cruise Attack, Land of Sagan, Galakzions, Deffendar and many others. Available from WH Smith, Co-op, Boots, Menzies & other leading retailers, or direct from Mikro-Gen (Please make cheque/PO payable to Mikro-Gen & add 40p post & packing)

COURSEWINNER

The Punters Computer Program

COURSEWINNER allows you to use the power of your
computer to get the edge on the bookmaker.

- COURSEWINNER contains a database full of detailed
information on all English and Scottish flat courses.
The ten leading jockeys and trainers, and effect of the
draw is detailed for each course.

This information can be displayed on the screen at any time.

- The program analyses these factors combined with the results
of the last three outings, starting price and weight carried.
- COURSEWINNER is simple and quick to use, yet very powerful.
- Boxed with detailed instruction booklet.

Price £12.50 all inclusive IMMEDIATE DISPATCH (RETURN OF POST)

Available for: SPECTRUM (48K), BBC (B), COMMODORE 64, DRAGON, APPLE II/IIe, ATARI (48K).

POOLSWINNER

The Ultimate Pools Prediction Program

- POOLSWINNER is the most sophisticated pools prediction
aid ever produced. It comes complete with its own massive
database.
- Can be used for Scoredraws, Draws, Aways and Homes.
- The database contains over 20000 matches (10 years league
football). It updates automatically as results come in.
- The precise prediction formula can be set by the user. This
allows development of your own unique method.
- Package is complete with program, database and detailed
instruction booklet.

Price £15.00 all inclusive IMMEDIATE DISPATCH (RETURN OF POST)

Available for: SPECTRUM (48K), ZX81 (16K), BBC (B), COMMODORE 64, DRAGON,
APPLE II/IIe, ATARI (48K).

COMPETITION

92 games to win from GEC Dragon

Due to a production error, there were no differences in the GEC Dragon spot the difference competition (HCW 62). We are re-running this competition — and extending the closing date — to give you the chance to win one of 92 prizes of Dragon's fun game, Junior's Revenge, which costs £10.95.

Junior's Revenge is a seven-screen game featuring characters like ZuZu birds and the Vinegators. It runs on either Dragon.

Study the two cartoons and

circle the differences on cartoon B. Seal the cartoon and coupon in an envelope, writing the number of differences you found on the back of the envelope. Post your entry to GEC Dragon Competition, Home Computing Weekly, No. 1 Golden Square, London W1R 3AB. Entries close at first post on Friday June 15, 1984. Please study the How to Enter and Rules sections of the Elephant spot the difference competition in this issue of HCW: these guidelines also apply for this competition.

Complete clearly and fully — if you are a winner this will act as a label for your prize. Post to GEC Dragon Competition, Home Computing Weekly, No. 1 Golden Square, London W1R 3AB. Closing date: first post, Friday June 15, 1984. Do not forget to write the number of differences on the back of your envelope.

A Penny For Your Thoughts

Actually MicroQuest offers you rather more than a penny.

£1,000 to be precise, if you can come up with an idea for an innovative and original use of microelectronics.

MicroQuest is organised jointly by Williams & Glyn's Bank and MAP, the Department of Trade and Industry's programme to encourage the application of microelectronics. The competition aims to encourage young people to take an active part in the development of British industry and business.

WHO CAN ENTER?

MicroQuest is open to everyone between the ages of 16 and 21, and is divided into two categories. The first is a general category allowing entries from anyone between 16 and 21, and the second dealing with those over 16 in secondary education.

We require entrants to MicroQuest, to submit a 2,500 word report, identifying a new use for microelectronics and explaining how it could be implemented.

The applications can be literally for anything from musical instruments to control systems for mining machinery. The idea of the competition is to produce applications that will improve and develop original products or processes. It is important, however, that you keep in mind that the applications must be practical and

therefore realistic in terms of cost.

The report itself should give us a clear description of the area where you see the application being made, and what will be the benefits of the application. If you wish to illustrate your report, make sure that all your designs/illustrations are on A4 paper and that there are no more than 6 of them. When you send in your report it should include a summary of about 300 words of its contents.

The prizes for the general category will be a first prize of £1,000, with runners-up receiving prizes of £500 and £250. The schools category will have a first prize for the winner's school of £500 of computer equipment of its own choice, plus a cash prize of £150 for the winner. The runners-up will receive £100 and £50.

HOW TO ENTER

Simply tear off and complete the attached entry form and submit it with your report, which should also include a 300 word summary and any designs you have produced. The completed application form should be signed by your employer, teacher or supervisor.

Send the completed form to: "MicroQuest", Williams & Glyn's Bank, 20 Birchin Lane, London EC3

But hurry. Entries for the competition close on the 30th June 1984.

MICROQUEST APPLICATION FORM

Complete this form, which should be signed by a representative of your employers' company, or your training officer or teacher, and send it with your report and a 300 word summary,

Maths 32K BBC/ Electron £9.50

Scisoft, 5 Minster Gardens,
Newthorpe, Nottingham NG16
1AT

I'm afraid this is not the sort of educational program I can fully recommend as I cannot see what need it is meant to fulfil.

The tape comprises five programs all aimed at the nine-thirteen age range which seems about right.

In Lemonade you are a lemonade seller and decide how much lemonade to make in anticipation of the day's sales and depending on the weather. There is little if any maths in this program if you always choose to make less lemonade than the money you have available — so, rather pointless.

Angle is an estimation program which shows an angle always in one orientation and is less than inspiring.

Glass is a wire frame drawing program in which you set up a cross-sectional design and then the computer draws a 3D model of it; again, where's the real maths? I ask.

Percentage involves estimation of the shading on a 100 square grid and Hanoi is a very old logic game.

All told very pedestrian with no sound or real value. **D.C.**

Demolator 32K BBC £6.95

Visions, 1 Felgate Mews,
Studland St, London W6

As a marketing exercise this game is only available through one high street store at the moment. I advise you to see it soon.

You are the only robot left after a particularly nasty 1000-year war and you are trying to protect the last of the human race, in cryogenic suspension, from the nasties who have invaded your ship. There are 24 different screens so there is plenty of action. The comparison I can make is to a cross between a road race game and a space shooting game.

The action is particularly fast, as is the animation, yet there is

little flicker and eye strain. The cassette card contains a full explanation of the nasties and the title program is interrupt driven so that you can define the keys and read the instructions whilst the second part loads, other companies please note!

A great idea is a practice game on the second side which allows you infinite lives so that you can try every screen. **D.C.**

Flint's Gold 32K BBC £6.95

Micrograf, PO Box 17, Bracknell, Berks RG12 3NQ

You are a humble labourer who has worked on a farm all his life. Suddenly you reject your way of life, and become a fierce swash-buckler. You set out for the nearby port in search of adventure. Here you hear stories of the legendary Flint's Gold and you resolve to search for this mysterious treasure. It is at this point that you start the adventure, communicating with the computer by means of two-word sentences.

The game is written in Mode 7, and includes low resolution screen pictures from time to time. One of the most outstanding features of the game is the amazing sound effects; the best is the sound of waves hurling pebbles as they break, accompanied by the crying of seagulls.

While the game is loading a sea shanty is played, fading slowly as the loading finishes. The sound effects and music are something else, but the game is not remarkable. After taking so long to load I expected more. This one is just a little too difficult. **M.B.**

What's new, Aunty Beeb?

A wide range of programs for the BBC has been thoroughly scrutinised for you by our panel

Identikit 32K BBC £7.95

Stell, 36 Limefield Avenue,
Whalley, Lancs BB6 9RJ

The aim of this 'game' is to build up a face using the various shaped features you are allowed to select and then modify the face as you wish. I suppose this program could be used in schools as an introduction to observational skills or in the middle of a police project but after that I'm stumped as to what purpose it is meant to serve. To give the publishers their due they do only claim that it is "an entertaining introduction to the computer for children aged 2-8". But surely there are other, more educational, introductory programs available even for such young children?

The program is very easy to use, everything being menu driven and using only two keys. An innovation is the movement routine which allows you to wiggle ears or nose, blink eyes, frown or smile but the interest of my five-year-old waned after only two faces. For the older ones however there is a 'Kim's game' option where you have to reconstruct a face from memory.

A strange 'educational' offering of dubious value. **D.C.**

playability	90%
graphics	75%
value for money	30%

Vampire Castle 32K BBC £6.95

Micrograf, PO Box 17, Bracknell, Berks RG12 3NQ

In this terrifying adventure you live in a small village among peace loving simple country folk. When cattle are brutally slaughtered, a villager mysteriously disappears, and others are woken by eerie organ music and blood curdling screams in the middle of the night, you are volunteered to seek out and destroy the culpable Drac.

Two-word instructions and directions enable you to enter and explore the nearby castle. Remember, one false move and you're just another body for Drac to get his teeth into.

The game includes Mode 7 graphics and plays a tune while loading.

Adequate instructions are given inside the cover, and more appear after loading. The instructions set the scenario well but I would have preferred a more detailed list of usable verbs.

The game does include a 'save present position' option, standard in most adventures. This saves a lot of unnecessary typing the next time you play.

Overall it is not too difficult. Who knows, eventually you might get to meet Dracula. **M.B.**

COMPETITION

ENTER our spot the difference competition and you could win not one but four games from Elephant Software. Elephant is giving away prizes worth more than £1,000 — each tape costs £6-£7, so the total value of each prize is nearly £26.

The four games you can win are Paragram, Vanquisher, Ringo and Jerico 2 for the 48K Oric-1. The first three are similar in style; games of manipulation requiring logical thought.

In **Paragram**, you must rearrange 16 random letters on a grid in alphabetical order. As you move one, you dislodge three others. **Ringo** is a similar idea with coloured beads in two intersecting rings. You must shuffle them round to form blocks of colour. In **Vanquisher**, you must make up the word Vanquisher from the letters arranged on a top siding in a railway station. You can shunt them using the tracks and siding. None of these games are ever the same as the order of letters or beads is random.

Jerico is different: Joshua has laid siege to the city of Jerico to regain the lost H. Use rocks and food as ammunition, build ladders, use battering rams, siege towers and ballistas and make tunnels under the walls.

Elephant's aim is to make you use your brain and your micro to full advantage, as well as give you hours of fun. Director Dennis Wieckowski said: "Not everyone who owns a computer is 10 to 15 years old and mad on arcade games. Space invaders isn't my cup of tea. At Elephant we fill the gap between Hobbit-type games and space invaders. Our games are the kind where you sit down with a cup

Over £1,000- worth of prizes! Win four great games from

Elephant Software

of tea and a couple of sandwiches, not manic finger-twitching games.

"We like to encourage programmers, so all our programs are written in BASIC. We are keen that users should take them apart to study them and learn what they can and then modify them.

"We distribute through three major wholesalers and by mail order," he continued. "The business was started up about a year ago and we aim to bring more thinking games to the software market. We also do the same range for the Spectrum, with an additional game, Cosmic Pirate, which has 3D graphics and a bit of finger-twitching.

"Our Oric games are only compatible with the 48K Oric-1 and not the Atmos," Mr Wieckowski said. "However, you can easily convert them to the Atmos by changing the TAB instructions."

clearly on the back of the envelope the number of differences you found.

Post your entry to Elephant Competition, Home Computing Weekly, No. 1 Golden Square, London W1R 3AB. Entries close at first post on Friday June 15, 1984.

You may enter as many times as you wish, but each entry must be on the official coupon — not a copy — and sealed in a separate envelope.

The winners will be the senders of the first 40 correct entries opened at random after the closing date.

The prizes will arrive from Elephant within 28 days of the publication of the issue containing the names of the winners, or earlier.

Important: please follow carefully the guidelines for entering — incomplete coupons and entries in envelopes without a number on the back cannot be considered. If you are a winner, the coupon will be used as a label to send your prize, so clear writing is essential.

The rules

Entries will not be accepted from employees of Argus Specialist Publications, Elephant and Alabaster Passmore & Sons. This restriction also applies to employees' families and agents of the companies. The How to Enter section is part of the rules.

How to enter

Study the two cartoons — there are a number of differences between them. Circle the differences on cartoon B and seal the cartoon and coupon in an envelope. Write

Now your duck for rev

Duck Shoot

Living a duck's life is worse than living a dog's life, for not only do you have to put up with having a wet bottom for three quarters of the time, but the nasty humans are trying to shoot you too.

In this game we take pity on the duck, who never actually gets killed, and even has the chance to get his own back on the evil hunter.

The aim of the game is to shoot as many ducks as possible with the 10 cartridges you have left. Our hero, the duck, is in the meantime trying to drop his ammunition on you. If he succeeds then your gun becomes useless, so you must go off to repair it.

Hints on Conversion

We have made the structure of the game as simple as possible so that conversion for other machines should be easy if you follow the plan below.

- All the PROCedures can be changed to sub-routines and called with GOSUBs.
- Replace REPEAT/UNTIL loops with GOTOs or IF xxxx THEN GOTO.
- The screen format is 20 x 32 with up to 16 colours.
- The Electron has one sound and one effect channel.

In order to give the duck a better chance of survival you are not allowed to move your gun to the edge of the screen and ambush him. Whenever he flies off one edge your gun reverts to the centre of the screen and you must take aim again.

This duck is not stupid either! He flies across the moor at several different heights. If by any sad chance you do actually hit him, he plummets to the ground completely demolishing your gun. At this stage the dog mentioned above comes running on to collect the fallen duck.

But all is not lost — the duck is only winged and winded and the barking of the dog revives him sufficiently to allow him to make his escape and fly again another day.

The program was written by 10 year old Robert and his father, neither of whom have had any programming training except from the local BBC user

group. In fact the whole project was started one club night, during a session on how to write a game from scratch.

The program was written on an Electron (Yes they do exist!) and because of this it will run quite happily on a BBC too.

The only problem is that the extra speed of the BBC means some of the animation is not as effective as on the Electron. Therefore there are some BBC modifications detailed below.

The program has no REMarks in order to save memory and to make things as fast as possible but the

PROCedure names are supposed to be self explanatory and should help you to see what is happening.

The most interesting technique, for those not familiar with the sound facilities, is the simulation of interrupt driven playing routines.

PROCnote itself is simple enough, it READ's the music DATA from the statements on lines 1440-1460 and plays the

x has a chance enge...

```

ELECTRON/BBC PROGRAM

notes required. However, because the PROCEDURE is called from within a REPEAT/UNTIL loop we can check for your being ready to play the game using the negative INKEY statement (for those unfamiliar with BBC BASIC this tests for a particular key being pressed only at the instant the statement is executed) and then stop the music to play the game.

It is possible to have the music playing throughout the game but we found this to be annoying.

There are two initialisation routines setting variables, one for the whole program (init) and one which resets everything before each new game or sheet (run).

By defining two ducks (duck\$ and duck2\$) we can give the impression that the duck is flapping its wings. All that is required is to print one on top of the other quickly enough and you have your flaps.

Dont type line 10 until you are sure you have a fully debugged version of the program.

BBC users change the number on lines 1540,1570 to 30. Add lines 525 and 1235 both saying TIME = 0: REPEAT UNTIL TIME > 5. There is no reason why you cannot change any of these values to suit yourself.

How it works PROCedures

PROCinit set up all the variables which are needed throughout the program

PROCrun set up those variables which are needed for each new attempt

PROCinstruct prints instructions on screen, plays tune and waits for space bar to be pressed

PROCKey checks for keys being pressed and acts accordingly

PROCdrop deposits the bird's revenge

PROCreset sets duck up into a new position for each run across the screen

PROCfire guess what this does!

PROClleft moves gun left

PROCright moves gun right

PROChit checks to see if duck is hurt and then reacts

PROCshots prints out of ammo message

PROCfall shows duck falling to earth

PROCdog the retriever routine

PROCnote plays a single note

PROCchars defines characters

PROCstrings sets up actual strings to be printed

TI-994A SOFTWARE

3 great games for the unexpanded TI-99/4A

PILOT

£5.95

A great new flight simulation game for one player. Options for take-off, landing or in flight. Graphics display of landing strip, terrain map, instrument panel. Full instructions included. Graphics and sound.

TI TREK

£5.95

Defeat the Klingon invasion fleet. Includes 5 skill levels, graphics quadrant display, 8 x 8 galaxy, phasors, photon torpedoes, long range scans, and much more. Full instructions included. Graphics and sound.

FORBIDDEN CITY

£4.95

A deserted alien city contains a vast treasure but this is guarded by deadly traps. Can you decipher the clues left by previous travellers? Text adventure.

Send cheque or P.O. or telephone with Access/VISA for immediate despatch. Please add 50p p&p to orders under £10. Orders over £10 post free.

APEX SOFTWARE

Hastings Road, St. Leonards-on-Sea,
E. Sussex TN38 8EA
Tel. Hastings (0424) 53283

SPECIAL OFFER FOR TI-99/4A OWNERS

Full free 16K Basic fully graphic adventure, buy any of the games listed below from us mail order before 12th June and we will give you a free game (T199/4A).

BENEATH THE STARS. (T1 Basic) Just Released

£5.95

Our latest full action packed arcade style game. defend your space base, with 9, yes 9 keys controlling the action you will be very busy firing your guided missiles, lazer cannon, mobile lazer and driving your space buggy as you struggle to repair your defensive force field. Even the aliens are animated in this super game. Special features! Select your own keys, 5 skill levels from trainee to virtually impossible. hall of fame and brilliant sound.

ADVENTUREMANIA (IT Basic no command module needed)

£5.95

The number 1 fully graphic and text adventure, 30 locations, discover the ultimate quest. H.C.W. gave five stars. A real challenge taking hours, days, weeks, even months to complete. See review in July edition of Software Today.

MANIA (T1 Basic no command module needed)

£5.95

Fully graphic and text adventure. can you escape to the corridors of time. H.C.W. gave 5 stars and said I would certainly buy Mania. See review in August edition of Software Today.

GAMES TO REMEMBER FROM

INTRIGUE SOFTWARE

Send Cheque/PO to:
INTRIGUE SOFTWARE,

BBC users' guide

How to use the guide

There is no doubt that the BBC computer was made to be extended, which it can be in almost any direction. It has so many different interfaces that it would be easy to dwarf the computer with add-ons. The difference between BBC add-ons and those for other computers is that, since the BBC is designed to be extended, the BASIC and machine operating system can control add-ons with the minimum inconvenience for the user.

This survey aims to help you choose add-ons for your system; the range available is vast. You can attach real time clocks, digitizers, disc drives and almost every other piece of computer equipment invented, including the unique BBC buggy.

All the items mentioned have a rating. These are personal and subjective, based upon my experience. These ratings should help you make your choices. The ratings are in two groups: those based on actual hands-on experience and testing (shown by an H) and those based on the manufacturer's information (shown by L for leaflet). Ratings should not be directly compared between these two categories. When you are about to buy one of these products I would advise you to read the review, noting the source of information, and then if possible try the product out at a local dealer or an exhibition. I would caution against mail order on some of the more expensive items. Even during the preparation of this supplement promises of delivery were made which never materialised!

Each type of add-on is introduced and its main features analysed, followed by a detailed description of the various types available.

Prices given were correct at time of writing, so please check if you think there could have been any change. All include VAT, and postage and packing if appropriate.

If you manufacture a product which you would like to be reviewed for the next issue of the supplement then please get in touch with HCW as soon as possible and we will do our best to include it.

Disc Drives and Interfaces

Prices are for a single-sided drive unit with 40 tracks (100K) and for a double-sided, double drive unit with 80 tracks (800K) unless otherwise stated

Acorn disc drives

check with local suppliers

It is easy to assume that the computer's manufacturer also supplies the best disc drive. I'm afraid this is not the case here. I originally owned one of these drives and was less than satisfied with it.

Acorn's disc drives are supplied in two styles only: a single-sided, single drive 40 track and a double-sided, double drive 80 track. This means there is not only restricted choice but there is no opportunity to upgrade either.

This is quite unsatisfactory, as I'm sure Acorn have found to their cost and to the gain of the independent suppliers.

The drives are all full height and therefore take up a great deal of space. The reason for my dissatisfaction is their unreliability and the way in which they go out of alignment so easily. This is worrying under any circumstances, but can be fatal if you are working on important discs.

I cannot really recommend these drives.

L ★

Alpha Disc drives

£144.90/£533.60

Alpha Disc's drives now come in two distinct forms, both made by Canon but differing in size and characteristics to some extent. The prices given above are for the MDD drive which are two-third height and can be purchased in any combination you wish, including an upgradable drive in a dual case ready for the second drive to slot in.

The drives also come with or without power supplies in the single drive range, although the dual drives come only with a power supply.

To all extents and purposes these are the same drives as the PACE ones reviewed below and, although they are in different cases, I think my previous comments should also apply here.

The new species of drive have some interesting specifications. They are the new Canon one-third height MDD 221 models, which Alpha Disc modifies in two ways. Firstly they add in a secondary LED controller board, which not only shows which drive is working and, by colour, in which track mode it is working (40 = green, 80 = red), but also if the power is switched on or not. The second enhancement is the new secondary switching power supply which runs so coolly that no ventilation holes are required.

As the price of these drives seems to be the same as for the old style I would suggest they are worth investigating.

85%

L ★ ★ ★ ★ ★

AMS three-inch disc drives

£225/£399

This company was the first on the market with the new three-inch drives for the BBC. AMS only supplies two configurations: a single-sided single drive unit, 40 tracks, and a double drive unit to the same specification. The reason is quite simple. The discs are double-sided but are meant to be removed and turned over.

The discs are also well protected against any possible damage, something for which the normal floppy disc is most unprepared. There is a hard plastic case and a steel shutter which automatically moves into place when the disc is taken out of the drive.

The units are supplied with manual and disc utilities both on a disc and in an EPROM. This is an excellent idea as it means discs can be formatted without damaging the contents of memory and without having to insert another disc into the drive containing the formatting program.

Their small size and robustness make these ideal for those applications where physical damage is possible and I would expect them to have a good future in education when more software becomes available in this format.

Blank discs are a little more expensive and more difficult to find than ordinary floppies but this could change rapidly as demand grows.

value for money

70%

L ★ ★ ★

Cumana disc drives

£194.35/£539.35

Cumana is another company which has been supplying drives for the whole of the BBC DFS's life. Cumana is a company with a high reputation for quality, reliability and delivery. Its range is now one of the most comprehensive available. Not only does Cumana do the full range of single/double drives, single-/double-sided and 40/80 track but also units with and without a separate power supply.

The argument is made that the BBC power supply unit is not powerful enough to run the double drive units and so they require a separate power supply in order to get the power they require. I cannot really comment on the argument except to say that I have been running my (PACE) double drives off the BBC's power supply for well over a year now without any trouble at all. The drives with the power supply built in have their own mains cable with moulded plug and a neon indicator power switch.

Cumana also supplies switchable 40/80 track drives at £64.40 above the price given. This is not such a good idea as it is likely to encourage people to switch between modes while the drives are powered, which can then lead to data errors.

This is the only company so far to package and market their drive for the high street stores, such as W. H. Smith and the Spectrum shops. For this reason they may be easier to obtain.

value for money

75%

L ★ ★ ★ ★

LVL disc drives

check with your local dealer or LVL for price

LVL supplies not only these drives but also a double density controller which can be used with them. I haven't yet seen the controller but the drives are very similar to the others reviewed here.

They are supplied in colour-matched cases and are generally two-third height. They come complete with all leads, manual and a utility disc. There is an upgradable model which comes fitted with a blanking plate in the place of the second drive. The standard drives are powered from the BBC but LVL also makes a version with a power supply. However, LVL doesn't seem to produce a switchable 40/80 track disc drive as so many manufacturers do.

Not enough information for a rating.

Mail Order Micros disc drives

£209.30/£571.55

This company also markets a full range of drives and the double drives can be supplied with or without their own power supply. It also offers the choice of stacked or flat units on the models with power supplies built in.

What is unusual is that the company supplies its drives with detachable cables, both power and data: this could be of interest to those who use

PL GRAPHICS SYSTEM

WILL UNCHAIN THE GRAPHICS POWER OF YOUR BBC MODEL B MICROCOMPUTER

An easy to operate, complex graphics system with new and very advanced software giving a versatile CAD system. Complex pictures and diagrams, or original designs can be quickly, easily and accurately reproduced. The system consists of the 'GRAPHIC DIGITISER' incorporating a 256mm x 205mm tracing pad, the 'Control Program' (tape or disc), instruction manual, key card and quick reference card.

WIDE RANGE OF INSTRUCTION BLOCKS

Instruction blocks enable boxes and circles to be constructed from two probe positions filling area with chosen colour, painting area with colour or shading, drawing of irregular shapes, outlining in different colour and varying line thickness, creating lines in horizontal, vertical or angled modes with parallel lines in repeat or multiple repeat styles in selected thickness. Special routines for plotting circular arcs and for the animation and multiple plotting of text.

USER-DEFINED CHARACTER PROGRAM

Freedom of character design means shapes and symbols can be created in very fine detail. Characters may be plotted many times over, clustered, mixed with normal text characters, used in animation effects, "turtle" control.

COMPLETE EDITING FACILITIES PROVIDE A CAD SYSTEM

Mistakes can instantly be erased and rectified with random and sequential access to stored picture data which may be easily revised, corrected and modified.

IMAGE MANIPULATION

Images may be reflected, rotated, moved, scaled, duplicated, compressed and extended.

STORAGE

Pictures may be saved on cassette or disc file or dumped to printer. The Control Program contains a range of printer dumps.

FULL COLOUR/RESOLUTION

The range of colour facilities offered by the BBC Micro in Modes 4 and 5 are easily handled by the PL GRAPHICS SYSTEM, in high and medium resolution.

CURSOR UTILITY CALLS

The probe positions displayed on screen can be justified vertically and horizontally to aid rapid joining of lines. Additionally vertical, horizontal and perspective guide lines can be constructed.

DISPLAY PROGRAM

The main control program contains a 'Display' program which enables the user to freely mix visuals in their own programs.

ACCURACY/SPEED

Probe position is continuously displayed on the screen and fidelity of image to original drawing is excellent. Completed images can be recalled from file and dumped to the screen in seconds.

NO KNOWLEDGE OF BASIC REQUIRED

Users can very easily and quickly familiarise themselves with the PL GRAPHICS SYSTEM.

more than one micro and can make up appropriate cables for the second. I would like this feature as my machine visits user groups and cable unthreading is a chore.

The drives in these units are all made by TEAC and as an extra the company supplies the instruction manual for the drive units — a feature I wish others would follow, as it makes servicing easier. Unfortunately there is no mention of DFS manuals or utility discs being included in these prices, so please check availability as you cannot use a drive without them.

70%

L ★ ★ ★ ★

Microware disc drives

£228.85/£511.75

Microware supplies a vast range of drives but please don't think their prices seem too expensive when compared to the others given. The company doesn't produce a single-sided drive at all so the price given above is for their 200K single drive, double-sided and 40 track.

These drives, like most of the others, are supplied in the BBC colour-matched metal cases, some of which also have a power supply unit. The company only produces half height drives and the double drive units are usually stacked. The double units with a power supply have a large area under the drives which is, to my eye, rather unattractive.

One feature to note is that this company markets an expandable drive unit which you buy with only one drive in place but which can become a double system at a later date by the purchase of another 'bare' drive unit.

Microware also produces one of the few BBC double density disc controllers which offer twice as much data on the same size disc, i.e. up to 1.6 megabytes on the 80 track, double-sided, double drive unit. It also claims to be faster than the Acorn DFS and to offer some compatibility with discs written on the standard DFS. This is the real test of such a system though, for if you cannot buy software which will work on your controller then the only use for such a system is to develop your own software, a situation many people would like to avoid.

value for money

70%

L ★ ★ ★ ★

MW Systems disc drives

£194.35/£470.35

This company also supplies its higher capacity drives with 40/80 track switching capability; it doesn't supply a purely 80 track drive at all. The interesting thing about the design is that they are meant to go under the BBC computer.

The case is the full width and length of the BBC. This means that there is a much wider gap between the drives than in the normal drive system.

One of the features is the ability to upgrade from single to dual drive by simply purchasing a bare drive unit to plug into the case you already own. However I would expect some people to prefer this to be done by an engineer. The lower price given above is not for the upgradable pack, however (400K is the lowest capacity at a price of £279.45); it is for the new 200K drive from Epsom which MW Systems also supplies.

This unit is attractively styled but not supplied as a double drive, as the singles can be connected together and then run as dual systems. All the prices include leads, manual and utility discs.

value for money

90%

L ★ ★ ★ ★

Opus disc drives

£179.95/£599.95

The range of Opus disc drives includes 3-inch microdrives and both single and double drive 5¼-inch Japanese disc drives.

Prices range from £179.95 for a single-sided 40 track drive to a double-sided double drive (80 track, 800K) with 1.6 megabyte on line at £599.95

According to Opus, the 3-inch microdrives have twice the capacity on line of other available drives and use the lowest power consumption, because of their direct drive. They have an access time of 3 ms and are totally compatible with 5¼-inch drives. Price includes case, leads and utilities disc.

The 5¼-inch single drives are half-height, and again the price includes case, leads and utilities disc. All dual drives are metal cased with a separate power supply. E.G.

PACE disc drives

£201.25/£465

This company has been supplying disc drives for almost as long as the BBC disc interface has been available. It has an excellent reputation for both service and reliability. The drives are all supplied with a metal case in the BBC colour, complete with cables, manual and utility disc. The drives are available in two styles, half height and the very neat new one-third height models. They all cost the same price so you need to consider the space you have available before purchase and buy the style to suit you.

I have had experience of both styles and they are equally reliable and fast in operation. They are so fast that the BBC's keyboard links can be made to inform the DFS of the speed available and so utilise it to the fullest extent. To say that the drives are reliable is almost too weak a statement; in more than one year's full and heavy use I have only had a few disc read/write errors, most of which can be attributed to my playing 'dirty tricks' on the discs.

The only part of the package that is not fully up to the mark is the manual, which is less informative than Acorn's. This is not really a problem if you simply intend to use the discs for program storage but the sections on random access filing and the use of files in assembler could have been more comprehensive. Also, as in common with most manuals, the various DFS error messages are simply skipped over.

The utility disc has a very fast formatting program and has the novel

feature of being able to be read by both 40 and 80 track drives. This feature is essential for the dual system 40/80 track drives which incorporate a switch to change systems and give you the flexibility to choose between large capacity or software compatibility.

value for money

80%

H ★ ★ ★ ★

Acorn DFS and interface

£97

This was the first disc interface available and, being the manufacturer's own system, is the one with which most of the software is compatible. It resides on an EPROM, which, when fitted inside the machine, gives a new range of commands for the disc filing system.

The firmware works well and is fairly fast but there are some glaring omissions and downright mistakes. One of the omissions is the formatting routine, which you need in order to organise your blank discs before you can record files or programs on to them.

Acorn only supplies this free with its own drives (or at a cost of £30) which is very mean indeed and seems to be aimed at protectionism rather than customer service. The utility disc is essential, as is a decent manual which is also given away with their drive or included in the £30 extra charge. The disc interface is otherwise reasonably reliable and all the commands are simple yet fairly powerful.

The few bugs I have discovered are in the sequential filing system where strange things can happen if your file length is not a multiple of whole sectors. The strange things involve some of your data being lost, so always save some extra data as an insurance against this. This system has set a fairly high standard for the products which follow but has room for improvement.

value for money

80%

H ★ ★ ★ ★

PACE/Amcom DFS and interface

£95

This interface tries to imitate the Acorn system while adding to it in many ways. One real advantage is that the formatting program is inside the chip and therefore always available, without losing the contents of memory. The other main feature is the ability to have 63 files on a disc instead of Acorn's limit of 31. This limit is due to the way that catalogue information is stored on the first track. The Amcom 'SYS1' discs use a different method of catalogue storage which, while using more space, does allow longer names of up to 15 letters (Acorn's limit: seven) and more files to the disc.

The number of files available on each disc is not of vast importance if you create large files or programs, but if you wish to store short items, e.g. from a word processor, like letters, it is very frustrating to find the catalogue is full if you still have over half the disc surface left empty.

The problems with this DFS are mainly to do with speed and compatibility. The early releases of the filing system were very slow indeed but this has been largely solved now and some of the random access filing commands prove faster than using Acorn's DFS. The system is slower each time you insert a different disc, due to the fact that it first checks to see which format of disc you are using and then reads the catalogue properly for that disc.

There are very few areas where the DFS is not fully compatible with the Acorn one but if you use coloured titles on your discs you will have difficulties. The excellent utility disc and manual supplied with the DFS can solve this problem though, besides containing many other useful programs like screen dumps for Epson and NEC printers.

This is a good filing system for those who need its extra facilities and are buying their first disc drive but I would not recommend those who already have the Acorn DFS to change over to this system.

H ★ ★ ★ ★

Sideways ROMs and ROM boards

Beebugsoft Exmon

£27 non members; £16.50 members

This is another good ROM which is used by many machine code programmers for all their development work. I have used the routines only rarely but they do offer an insight into the operation of the machine if you think machine code is double Dutch.

The routines are used from a front panel display and, as this is a language ROM, if you press BREAK, you return to that display. The panel displays all the registers of the 6502 central processor unit and a dump of part of memory. This can be changed to any area and the registers can be seeded with any particular value as you wish. Then you can simulate the program's action whilst watching the registers change as you press the space bar to single step through the code.

This is essential for debugging and development, as is the excellent disassembler which can even display a program in memory at one address as if it were really located in another.

There is a full breakpoint handler and also a relocater which will attempt to change the execution address of a program as you require. All told this is another excellent tool for those in a development situation.

value for money

95%

H ★ ★ ★ ★

Beebugsoft: Toolkit

£27 non members; £16.50 members

This ROM has a very good pedigree coming from the premier national user group for the BBC micro. Even better, it lives up to its pedigree. It contains all the usual memory display and editing routines, including a

program movement utility, allowing the development of cassette line renumbering facility.

But it is most impressive in its range of utilities. The first of these is the on screen editor which allows the modification of BASIC lines without retyping and can be toggled to insert or to overtype any mistakes. Added to this is a new type of error reporting routine which displays the cursor at any line giving an error so that you can correct it immediately, presuming of course you know how to!

A program compactor removes all extra spaces and REMs and can get you out of difficulties when memory is scarce.

The final and most vital utility is the *UTIL command which gives access to nine different options from a master menu. These include searches for strings, variables and even reserved words: this can also include global replacement. There is a program line movement facility, allowing test programs to be changed into procedures, as well as more general use. There are also list routines for string, numeric and resident variables showing not only names but also values. Lastly there is a procedure list function which I use a great deal. The ROM contains even more routines which I haven't space to mention but, for anyone serious about developing programs on the BBC in BASIC, this is a truly magnificent tool; one without which I could not cope now.

H ★ ★ ★ ★ ★

Disc Doctor from Computer Concepts

Disc Doctor allows manipulation of programs, files, sectors and bytes on your disc, even those in corrupted files and deleted programs. However, the software does have an irritating feature — it refuses to work with some disc faults which it reports as unhelpful and unspecified errors. The chip includes no less than nine programs for manipulating discs, plus DISCTAPE and TAPEDISC which automatically transfer files from discs to tape and tape to disc, respectively.

Using this package, you can search for text, construct discs to boot a menu of programs, format to 40 or 80 tracks and join several files. If you wish to load and save from disc you can, using the disassembler and memory altering program which form part of this package. One good feature is that almost any format for information can be used.

SWAP enables discs to have up to 60 files by providing two catalogues. It does not increase disc capacity of course, so the total size of 60 files cannot exceed 100K on a 40 track disc, but for applications with many short files (such as a utilities disc) this is just the job.

I have been using the chip for about a month, and have found no problems with it. Installation is easy, providing you have a spare sideways ROM socket or an expansion board. The chip contains its own HELP commands in case you are temporarily stuck for the format of a command, and seems very well thought out. I do not know how I managed without it and owning it has taught me a great deal about the BBC. If you use discs or write assembler programs then you must have this chip. It would be worth the price for half of the software provided!

N.W.

GTM ROM board

£38.95 (fitted)

This is the second ROM board I have used: the first one is not being reviewed as it has now been removed from the market and also as I cannot find words dreadful enough to describe it! The GTM board is the exact opposite to the first one. It is well designed, simple to use and causes no problems whatsoever.

The board is designed to be fitted under the keyboard and so avoids the troubles caused by some other boards which tend to build up heat inside the casing, especially above the memory chips. The board's capacity is 13 ROM which means that, with the main circuit board's three sockets, you can insert up to 16 ROMs — the maximum amount the BBC can page. I have inserted the maximum number of ROMs and then used the machine for periods of up to 20 hours at a stretch with no ill effects whatsoever.

A further design feature is that, being under the keyboard, the chances of the board interfering with other add-ons, e.g. RAM memory boards or internal second processors, is minimised.

Fitting is included in the price and this is worth taking advantage of. The work is usually carried out while you wait or within one day.

90%

H ★ ★ ★ ★ ★

GTM's Super Utility 2

£22.50

This is a very new ROM; I have used one of the development versions but the release version will be available now. The combination of utilities on this ROM is unusual but there is a great deal to choose from and some will become firm favourites I'm sure. By far the most powerful command available is the *BASED or BASIC editor command. This produces a menu on screen which uses simple and sensible command letters to take action as desired.

It has full search and replace facilities for BASIC variables, strings and even reserved words and unlike the Beebugsoft toolkit it will tokenise those words it can, so that it is simplicity itself to find all the procedures beginning with 'b' by setting the search string as 'PROCb'. You are then given the number of matches and can select to display either the line numbers found or the full lines.

There are even facilities to search for GOTOs, GOSUBs and RESTOREs with a particular line number following and to have 'wildcard' searches. You could also select to move, copy or renumber lines as you wish but my favourite is the packing routine used to save memory. This not only removes REMs and spaces but can also concentrate lines so that you don't waste space with extra line numbers, remove assembler comments, and even change variable names to the

shortest length possible without putting bugs in the program.

There are also other commands besides the BASIC editor. These cover formatting assembler listings, formatting disc drives, finding the amount of spare space on a disc, verifying discs, cataloging variables and you are even supplied with two screen dumps each for the Epson and NEC range of printers. This is a truly excellent ROM for BASIC programmers and can be highly recommended to even those with very simple systems. As you buy a printer and then a disc drive many of your needs will already have been satisfied by this ROM.

100%

H ★ ★ ★ ★ ★

Molimerx: Micromon

£32.20

This program, a machine code monitor, is also available on tape and disc and for this reason the instructions are not too clear. The problem is that they cover all the versions and the section on the EPROM version is right at the end.

The instructions also make it clear that there are two peculiarities (their words) about the program. The first of these is important and should have been changed before release: the ROM automatically presumes you are in the tape filing system and in order to save to disc you have to remember to change filing systems.

Unfortunately these are not the only problems this ROM causes. There are others which you would soon discover if you had more than one ROM resident in your machine at a time.

Something is wrong in the way this ROM is written and it corrupts the action of others you may wish to use. Add to this the fact that the *HELP facility is not active and that the breakpoint handler doesn't stop if you call a routine in memory, and you have a ROM of little use and poor value.

However, the company is very dependable and fully supports its software, so if you do have problems there is someone to turn to. This cannot excuse a program of this standard being released prematurely.

value for money

30%

H ★ ★

Molimerx: Micromon

£32.20

This is a BASIC toolkit from the producers of the previous program. Unlike Micromon, this one was written as a ROM program and therefore the instructions are much less confusing. Unfortunately it does share the problem of affecting other ROMs which are in the machine at the same time, for example, the Disc Doctor tape to disc transfer routine is completely corrupted by simply having this ROM in the machine.

The commands in the ROM are very well organised, i.e. they cover a fairly wide range of action yet are simple to operate. There are *CHANGE and *LIST commands which work on string, numeric and array variables as well as literal strings, a *FIND command which will find reserved words very easily indeed. There are program compactors engagingly named *STRIP, and a routine to put the spaces back too (*PAD). The unique command is the *CHARS, one which displays all the normal ASCII and the user defined characters. This can be very useful if you do a great deal of games programming or need to use special characters for science, engineering etc. The *VAL command is another particularly useful and easy one, it can be followed by a 'type' parameter and it will list the values of any type of variable including the array elements you have defined and filled. From what I have said so far you can see that this is a good piece of firmware but in its present form it is of no use to anyone who has other ROMs resident.

PACE: Commstar

£34.01

This ROM can only be described as a very specialised tool for those to whom micro-to-micro communication is not simply a toy but a vital need. The program here is an intelligent communications package to assist the connection of micros using modems and phone lines. This will allow you to pass data or programs to a friend or to pass messages via the various bulletin board systems around the country.

The firmware provides a simple to use method of matching protocols so that such interaction can take place. It is intelligent in that it has full memory buffering for input data, it is easily configured for different systems, it allows the full use of the machine operating system, handles all errors, contains an elapsed time clock so that your phone bills don't grow too much and has several operating modes including a chat mode for interactive use.

In all this is a well thought out piece of firmware which will be a vital tool for some users.

value for money

85%

L ★ ★ ★ ★

PACE: Toolstar

£34

This is another toolkit EPROM which is meant to help you develop programs. Unlike those mentioned above it is a hybrid of a BASIC programmer's toolkit and a machine code programmer's monitor. One of the outstanding features of this ROM is the extremely comprehensive, well written manual. Over 150 pages long, it is not only a manual but also a very informative and educational text for those who really know very little about the BBC's methods of program storage and the 6502 machine code instruction set. I feel that this makes the package ideal for the newcomer whilst at the same time being very useful for the old hand.

Toolstar has several unique features, one being the ability to be

extended. If you know how to write your own utilities then they can be used via this ROMs *EXTEND feature. Without any doubt, the facility I find most useful is the *FLIST command. This is used to produce a listing of a BASIC program even if it is corrupt and therefore not normally listable. Allied to this command is a utility which will try to restructure a BASIC program and make it recoverable called *FIX. There are also search routines, numeric conversions, renumberers, CRC checks, disc formatter and many other utilities for BASIC programmers.

The machine code writer is not forgotten either. There is a very good disassembler which even allows you to go backwards through a program to recheck a section and which displays the name of all the operating system calls as they occur. There are also full screen editing and breakpoint facilities in the commands. Once again this is far from a full listing of the facilities offered by this ROM which has to be one of the best compromises between BASIC and machine code tools possible and will represent excellent value for those only able to purchase one ROM.

value for money 95%
H ★ ★ ★ ★ ★

Softlife EPROM programmer £77.05 (incl p&p)

This is one of a growing number of EPROM programmers now available for the BBC and one of the neatest I have seen. The programmer is mounted in a small plastic case less than four inches long and three inches wide. Another unusual feature is the single cable which comes out of the box — the only connection necessary is with the user port. The reason for this is that the programmer 'pulls up' the 5 volts from the BBC for the 21 volts needed to program the EPROM.

Its size and lack of power cable mean this can be used on any BBC, disc or tape, in any location. The software for programming is, also unusually, supplied on an EPROM. You remove it from the EPROM and record it to any filing system you wish to use. This means that the cost given above includes an EPROM for your first program. You don't need to keep the programmer software in as you can save that as many times as you wish.

The software is good and gives most of the facilities you need, including the ability to program from a file, again unusual as most programmers only work from memory. The most useful feature for a predominately BASIC programmer is the ability to program a *ROM filing system EPROM. This means that your favourite program (BASIC or machine code) can live in your machine permanently and therefore be at your constant call. I keep all my frequently used utilities on one such ROM and this has made life much easier.

In summary, I have experienced no difficulty in using this product (and I had no previous experience), the software is easy to use and although the programming algorithm is slow it is still a very good buy.

value for money 85%
H ★ ★ ★ ★ ★

Softsmith: AIDS II £25 (incl p&p)

This ROM is really a BASIC programmer's toolkit but it does also have a disassembler. The ROM is used by typing *AIDS and from then on it is a very simple matter to choose the utility you desire from the menu that is presented.

The menu includes disassembly, memory editor, search/replace, list formatter, variable dump, beeper and printer. Most are reasonably obvious in both purpose and use but beeper is slightly unusual. If you select this option one of the machine interrupts is trapped and the result is that every key you press causes a soft low pitched beep to sound. I can think of uses for this in touch or copy typing as well as in education where children tend to crunch keyboards rather too heavily.

The printer command is a toggle, i.e. you use it once to turn the printer on and again to turn it off. This means that all the commands can be fed to the printer and the information they contain retained for future use.

Besides typing *AIDS for the menu there are four other commands which can be used whilst developing programs. They are *LLIST which is described as a 'program peruse' utility and makes the program scroll both up and down the screen in lines or pages on the command of the cursor keys. The other three commands are for use on BASIC programs and can help you to speed up development considerably. They are *LREN, *LMOVE and *LMERGE and they renumber, move BASIC lines from one part of a program to another and allow the merging (copying) of lines either within one program or from another program completely.

All these manipulation commands have a common syntax and are therefore very easy to use once you have learned the conventions. There is also a program repair facility which will do its best to repair any problems which might have occurred to cause a Bad Program message. To use this you simply select search from the main menu and it does the repairs automatically.

All the utilities work well and are fairly easy to use, the menu selection making life very easy. The only criticism I can make is that the use of tokens to search for BASIC keywords is rather cumbersome and difficult. This is a good ROM for the first time user and is very competitively priced.

value for money 85%
H ★ ★ ★ ★ ★

Digitizers

British Micro Grafpad £168.75 (incl p&p)

If you would prefer to draw directly on a pad which is then transferred to the screen, rather than trace a drawing from a sheet, this may be the add-

on for you. The price given above includes the software package. This is shown as an extra charge in the brochure, although how you can use the tablet without it I really don't know. The tablet has an effective resolution of 320 x 256 which may seem good by business micro standards but is nowhere near as good as the BBC can support in Mode 0. However, this should be easier to use than the digitizers as there is a menu area on the pad which copes with all necessary key pressing very easily.

The software supplied comprises two programs: the first is a screen co-ordinate routine which displays the x and y values for any selected point and the second is more of a design package with circle, square and rectangle drawing facilities as well as freehand, erasing and line drawing. This also includes a printer dump.

The company promises 'a family of educational software' soon. Although I haven't tried this product I cannot see how this is good value for money when you consider the facilities offered by the digitizers for a lower price. I think there is a chance the price will fall as production rises but a much wider range of software is needed.

value for money 50%
L ★ ★

Dollamore PL graphics system £99.75

There is little doubt that this is the Rolls Royce of digitizers. The main reason for this is not just the hardware component of the system but the superb software which accompanies it. The reason for such high praise is that this is the only one of the plotters reviewed which allows the use of pictures generated in your own programs. This is not only allowed but is made fairly simple due to the way in which the data is stored.

Unlike other systems this one stores the picture information as data 'blocks', which can then be re-used, in an animation program for example. In fact the very extensive demo program supplied with the system shows just how good it can be. There is even a facility for moving user defined characters around the pictures!

The actual base/stylus unit is strong enough to support your TV or monitor, which is the ideal place to use it, with the computer at the side. I cannot say that the picture drawing software is easy to use but then it is so powerful it has to be fairly complex. The choice of keys is very sensible and besides a very full manual, 56 pages long, you are given a summary card and a user defined key strip. There are two pictures provided on which to practise and these give very good results on screen.

The only reservations I have about the system are its small drawing area (A4), the restriction to Modes 4 and 5 only and the rather loose feel of the arm, but these are highly insignificant compared to its other advantages. This is well worth the money if you need a good digitizer.

value for money 75%
H ★ ★ ★ ★ ★

RD digital tracer £69.95

Of the three products of this nature I have reviewed, this comes in the smallest box and may therefore have special advantages for those who use their micro in the cupboard. Seriously though, in spite of its box this is a very good product indeed.

It has several unique features. Unlike the others, this product doesn't have a base board and can therefore be fixed anywhere. This could be ideal if you want to use it on a desk which is already in position. If you are going to use it in a fixed position it should be screwed down or attached with the sticky strip provided.

Another unique feature is the program which allows you to create and use up to 15 screens of picture and text in Mode 7. The tracer itself is made of plastic and, although not very good looking, is extremely functional as the material is so light.

This is the only one of the digitizers which had a cross hair style tracer which I found to be much more accurate than the others, as it gave better control. The software is very well written and easy to modify for your own use as it is written in BASIC. One of the special features is the ANIMATE facility which allows you to make animated displays using the logical/actual colour change technique. There is a screen dumping routine for Epson and Seikosha printers but, being in BASIC, this is very slow indeed.

All told this is a very impressive product with many features which are likely to make it a popular choice.

value for money 95%
H ★ ★ ★ ★ ★

Tarren DigiGraph system £78.20

This is a very robust and elegant digitizer which will be of great interest to those who wish to use it with children or in applications where durability is an essential. The base board is laminated and has a wipe clean surface to which you could stick sellotape and attach drawings. It is reasonably light and this makes it easy to store and transport.

The software is good and the manual and worksheets accompanying the package are excellent. They were developed in a school and the 12 sheets form a fairly comprehensive tutorial on using the machine, incorporating all the basics, and demonstrations of highly skilled technical drawing. The software is easy to use and has sensible key instructions, e.g. H = horizontal line, C = circle. The package also contains a screen dumping routine for Epson and Walters printers.

I particularly like the status line which gives you all the major information you need at a glance. Another excellent feature is the scaling facility which allows you to increase or decrease the screen size of a

FROM W.H. SMITH

A DOUBLE-SIDED 3" DISC DRIVE AT A SINGULAR PRICE.

THE OPUS
SUPER 3 MICRODRIVE.
£229.95 (INC. VAT)
FOR USE WITH YOUR BBC MICRO.

For only £229.95 (and that includes VAT, and all the necessary leads) you can have an OPUS 500k double-sided disc drive. And remember 3" disc drives are fast becoming the standard for home and business use.

This is an even bigger bargain than it sounds. For you're getting a double sided drive at the price that other company's sell single sided drives for. It reads and writes to the disc cartridge from both sides, giving you twice the on-line capability of other 3" drives. And there's no need to flip the disc over!

STATE OF THE ART TECHNOLOGY FEATURING:

- Easy to connect to the BBC Micro
- Compatible with most other makes
- Comprehensive manual
- Free disc cartridge
- Format, verify and other utilities provided
- Direct Drive
- Double sided
- One touch cartridge load
- 3 ms access time
- Portable, compact and reliable
- One year's full guarantee
- Totally compatible with 5 1/4" drives

Modems

Minor Miracles World Standard modem

£118 (incl p&p)

This is without a doubt the modem for the enthusiast. Not only does it offer access to Prestel, but also to almost every other database or bulletin board in the world. In total it offers six different standards all controlled by a rotary switch on the front panel. This means that you can even spurn the databases completely and ring up your friend and swap jokes or programs via the keyboard and computer.

One thing to note though is that the price given doesn't include software and you might need to develop some of this yourself. This is perfectly reasonable in this case, as there are so many standards available the configuration of the software would have been a nightmare. It may be worth looking at one of the communication ROMs to help this task. While I haven't had a chance to see one of these modems yet, it has an exciting specification and should be of great interest to the serious user.

value for money

95%

L ★ ★ ★ ★

Prism Accoustic Modem

£60.10 (incl p&p)

This is the first modem I ever used and it certainly was a good way to start, especially in price terms. As the name suggests this is an acoustic modem, i.e. the telephone handset plugs into the top and then the micro communicates, using sound signals, to and from the handset. This can be a good arrangement, but I use modems in a noisy place and the amount of corruption is totally unacceptable. This does also mean that you must have a standard dial telephone by the computer.

The software included in the price is good and fairly easy to use although I do think the manual could explain some things better. The software doesn't include an offline message editor, which is a real pity, although there are programs to do this job on Prestel, usually free.

This is a 1200/75 baud modem which means that, while you can use it to access Prestel standard databases, it cannot be used for direct user-to-user communication. This is not really a surprise when you consider the price. Overall this is a good modem for beginners who want to experiment without losing too much money if they don't like it. Unlikely to charm seasoned users.

value for money

80%

H ★ ★ ★ ★

Tandata tm100

£124.40 (incl p&p)

This has to be one of the best value modems on the market at the moment. Although it is only usable at 1200/75 baud, i.e. Prestel standard, it has a host of very worthwhile features.

This modem features a battery powered memory for up to eight numbers, including identifiers and passwords if you wish, an autodial and redial facility if the number does not respond and a very simple method of changing those numbers.

This is also a hardwired modem, i.e. it plugs directly into the Telecom telephone socket, so there is no chance of data corruption from extraneous noise. The price given above includes the software for the system and all leads.

The software and manual provoke my only real criticism. I think more thought and planning for the new user could have been put into the manual. The company is aware of this, however and is going to rewrite the manual soon. In the meantime it is issuing a supplementary information sheet to users.

In general the software is good and offers some valuable facilities, such as frame tagging, so that you can easily go back to important frames, and an offline message editor which can save you pounds in phone bills.

There is no doubt that I have fallen in love with this modem and will be very loath to have to go back to using my acoustic modem again.

value for money

H ★ ★ ★ ★

Micro Robotics

Beasty by Commotion

£49.95

The heart of the Beasty is an interface capable of controlling several servos through the software in the BBC. The applications for a product of this type are enormous. Models and puppets can be moved, switches and cameras can be directed by remote control, as well as anything else you can think of.

Beasty is meant to be connected to up to four direct feedback servos of the type usually used in flying or racing car models. These are not only simple to use but easily prohibitive. As the Beasty is designed for the standard servos it should also be easy to find parts and accessories.

In the future the company is intending to sell a robotic arm kit which will connect to the Beasty and cost about £75 — considerably less than current models. Commotion also markets a control ROM which takes the

hard work out of the input/output control, at a cost of about £45.

All told, this seems to be a very well thought out and simple way to try out the field of microcomputer control without great expense or high level of programming expertise.

L ★ ★ ★ ★

BBC Buggy by Economatics

£189 (incl p&p)

OK, I thought, so this is the famous BBC buggy. It's just a turtle which wanders around the floor and draws pretty pictures. But I was wrong, as I soon found out; the Buggy I was using didn't even have a pen (although one is available). Now I'm glad it didn't because it made me explore the machine and its possibilities thoroughly. It really is something.

It is more than a turtle because of its range of sensors. As I explained to the children, it has two eyes, two feet and even two hands. Using its hands it can find and measure an object placed in its track, using one eye it can find a light and tell you, using its other eye it can follow a black line, read bar codes to play music or learn a new tricky movement. This is all possible through the very sophisticated software supplied with it.

There is no doubt that after using it I wanted to know and learn more about artificial intelligence and felt I could make the program more efficient if I could only make it do this or that or perhaps the other. That is what the Buggy is really about. Yes, it will make pretty patterns if you want, but it can do so much more too. The whole package is very simple to use (once you have built the Buggy, that is), all the leads are supplied and they are easily fitted to the BBC. The documentation is good and the software, as I have said, leaves you itching to take it apart so you can find out how it works.

Whilst I can't honestly say I would like to spend this amount of money on such a sophisticated toy, everything about it is well designed and I feel that it would have a place in most schools.

value for money

H ★ ★ ★ ★

Keyboards and joysticks

Flight Link control joysticks

£17.95/£18.95

The prices given above are from my local dealer, since these sticks are only sold through such outlets. Flight Link was one of the first companies to start making joysticks for home computers. Their product is very well designed and very good value for money. The prices given above are for the analogue (J6) and self centring types (J7) respectively. They come in pairs which connect together at the lead end therefore have a single plug.

The analogue type are the ones to buy if you only want to buy one pair of joysticks, as these allow the computer to have information about any movement you choose to make. This means that they can be used for any of the drawing programs or games such as Mission Control which need that information.

The reason why the self centring stick is produced is for the extra feel this gives you on some games where the only movements possible are up/down and left/right or combinations of these. This type of stick does not contain potentiometers but has switches giving only three possible values on each channel.

The only criticism I have to make about these joysticks is the small fire button which, while very positive, can get lost at times.

value for money

H ★ ★ ★ ★

Maltron keyboard

£201.25

Why is the skill of touch typing so rarely learned by computer users? Maltron believes that it is largely due to the ancient design of the keyboard. The Maltron keyboard was designed 'for hands', and, instead of being flat and rectangular, is undulating and separated into two discrete areas, one for each hand. This is a case of application of ergonomics to the design of the human interface of a machine.

The manufacturer claims that there are many benefits in its revolutionary design. These include greater accuracy, reduced learning time and greater operational comfort, leading to less fatigue. The BBC model includes all the function keys and a much more sensibly placed BREAK key. The cursor keys are on different sides of the keyboard, to be operated by different hands: very sensible. The keyboard is connected by a ribbon cable and leaves the BBC's own keyboard free for use if you wish, although the Maltron can be changed to an ordinary QWERTY style by a switch.

Obviously this is not an add-on for the ordinary user, but if you use the keyboard a great deal it is worth investigating.

Diary & RAM Filing System for the BBC Microcomputer

"The RTC + RAM provides a fast and efficient Diary and RAM filing system that is particularly simple to use."

Acorn User, April 1984.

The Diary is sophisticated, yet simple to use appointments' storage and retrieval system with unique features:

- Available and accessible at any time - no need to load disc or tape.
- Audible alarms at preset times with associated screen messages.
- Automatic reinsertion of repeating reminders.
- Search of appointments by particular words or numbers.
- Easy entry and display of messages.
- Easy access to real time and date from other programs.

RAM filing system provides convenient storage for most frequently used programs and documents.

RTC + RAM system comprises Diary and RFS software in a ROM, electronics in a separate housing (4Kbyte or 30Kbyte storage) and instruction manual.

4Kbyte RTC + RAM £128.00p + VAT + p/p (£149.00p inc.)
 30Kbyte RTC + RAM £300.00p inc. (4Kbyte to 30Kbyte upgrade is available)

follow the instructions given. If you wish to use the keypads fully then you must also purchase the adaptor box which plugs into both the analogue and user port; this then allows the insertion of two joysticks or a joystick and a digitizer.

To use the pads you first configure the software so that the keys give the result you desire — they could become a numeric keypad, a new set of function keys or even programmed to insert BASIC keywords.

This is an excellent joystick in its own right but if you also want a keypad then it becomes double valuable and of course, there is no reason why you cannot start with one stick and buy the box later. I always use this as my first joystick now.

H ★ ★ ★ ★ ★

Light Pens

RH Electronics light pen

£49.95

This package is not the simplest light pen for the BBC but it is one of the most professional and robust ones. For the price you get the light pen and its associated electronics, a demonstration software package including the driver programs and a 10-page manual.

The pen plugs into the joystick port at the rear of the machine and cannot be used directly for input, as it first needs a sophisticated machine code driver program to be installed. All the details of how to use the driver are in the manual; however the manual is rather technically written and not very clear. There are many options available, e.g. input accepted on pressing, releasing or constantly depressing the switch, but they are not as simple to change as they could be. This means that using the pen for your own programs is not easy and is very much trial and error at first.

Construction and design of the pen are excellent. Electronics are housed in a colour-matched metal case. The pen has an LED indicator in the rear so that you can tell at a glance when a valid signal is being read. There is also a switch in the tip to tell the pen when to input the desired position. This is very easy to use and almost foolproof, making this pen suitable for quite young children.

The demonstration software is very simple, with only a line-drawing program and noughts and crosses from. These work well enough but are not very interesting. They are written in BASIC though, so that you can see how they work and try the ideas on your own software.

Although this is an expensive item it is not very simple to use, and there is currently very little software (only a single screen drawing package to my knowledge) restricting its use to those people wanting to create their own software. More for those with a specific need for light pen input than for the average computer user.

Robin light pen

£29.90/£41.40

This company produces two models of pen, hence two prices. The first price covers the standard pen, used for this review, and the second price is for the professional pen, which has a touch-sensitive switch. The pens are supplied with a painting and drawing program on cassette (disc £5.75 extra) and written details of how the pen may be used in your own programs.

This is a very simple procedure, when compared to the RH pen, comprising only some 20 lines of BASIC. The drawing program supplied is simple but fairly responsive and easy to use, and makes a good demonstration of the pen's possibilities. The pen itself is a ballpoint-type stick with a lead and analogue plug at the end. There is a fine tip attached to the end but this can be removed if you need to increase sensitivity. I found that this had to be permanently removed if the pen was to get any signals from my colour monitor.

The feature which really sets this pen above the others is the range of software already available. I have used four packs, detailed here with their prices.

Synthesiser (£7.50) is a souped-up stylophone-type program which enables the pen to play 14 sounds at four tempos with a range of four octaves and with harmony.

Matching Series (£11.50): Two programs, one involving colour, size and shape matching, the other letter and number matching. These are well written educational programs to a high standard.

Logic Puzzles (£14.38): Three programs all involving the development of logical strategies of different kinds. The ubiquitous Tower of Hanoi, a Sliding Block puzzle and the most intriguing one of all, Space Shuttle. Letter Formation teaches the child to write the lower case letters with the pen.

The company also plans to release a talking dictionary later this year in which the child simply points the pen at a word and the word is spoken.

This pen offers good value and easy program control besides good software and can be recommended to those interested in alternative input media.

Memory expansion board

Aries B20 memory board

£99.95

This board can give you 52K of memory on the standard BBC computer, or so it claims. Its main feature is that you can use the high resolution

graphics and still retain all the memory you would have if you were using lesser graphic modes. Using the RAM for graphics is by far the easiest of its applications: all you do is insert the EPROM which comes with the unit and then write as big a graphics program as you like. All the screen will be stored on the Aries board and therefore not take up room you may need for the program.

The less RAM the screen occupies the less the Aries board is actually used, meaning that you always have 28K available whichever mode you are in. If you are capable of writing the control software required then you could also use the board for data storage (although not for BASIC programs) and have two banks of data in memory at one time. The board can also be switched off by a single command to give compatibility with all existing games or application software.

Whilst the board does all that is claimed of it, I cannot believe that it is what most users need or want. I am firmly of the belief that this is a specialist product for those requiring high resolution graphics programs of long length or for those who have the skill to use such data banks in their own programs.

Stands, cases and covers

Graingate's keyboard cover

99p

This has to be the simplest and cheapest of the add-ons featured here and potentially one of the most useful. This cover is a vacuum-moulded clear plastic cover shaped to closely fit over the keys on the computer. It rests around the sides but encloses the keyboard completely and keeps out all moisture and dust. The product does all that is claimed of it and is particularly suited to those who use computer consoles of the type mentioned above, as it is often impossible to use the overall type cover since you cannot get to the back of the machine easily. This product fits the bill and I recommend it heartily.

Intastor Micro aids case

check price with manufacturer

This is a very well finished case which will not only fully protect your micro computer but also hold most of your accessories. The case is made in ABS plastic to the familiar black attaché case design and is fitted with vacuum-formed mouldings to keep everything in place. There are spaces for the computer and leads, a cassette player (maximum size 11 x 7 x 3 inches), several software cassettes and the manual.

This is a great idea for those who either need mobility or tidiness in between use of the machine. The only reservation I have concerns the fittings: if your system becomes larger than the case can accommodate then you will have problems. I much prefer the sort of case which has the minimum of fittings and the maximum of usable space for all those extras I need to carry.

L ★ ★ ★

Silent Computers consoles

£56.34 (extra module £19.54)

In case you hadn't noticed, the BBC computer case is made of plastic and cannot support the full weight of a monitor or TV. This means that if you want your screen to be above your micro then you need to support it on something else. This has led Silent Computers to produce a colour-matched computer console from aluminium.

The console completely surrounds the back section of the BBC and is meant to be transportable without having to remove various leads. Above the computer there is a shelf of two different heights, 10 and 11.5 cm. This should accommodate most cassette recorders or disc drives with ease, as well as the Torch disc pack.

If you still don't have enough room, there is an extra module which bolts on to the console, providing space for the second processor or teletext adaptor. At the same price as the extra module, there is a printer or VDU stand, without a shelf, which allows paper or the VDU to slip easily underneath. The products seem well designed and finished but the prices are a bit steep.

Other products

Acacia's Non-Volatile RTC and RAM diary/filing system

£147

If you have a problem with your diary and you use the computer every day then this must be the product for you. It is a plastic case about the size of a digital clock which attaches to the computer via the 1MHz bus and the auxiliary power output, but in order to make the product usable with others there is a replacement socket on the rear of the box for disc drives, etc. There is also a ROM to be installed on the BBC's main board.

Once this is done you have a diary attached to the BBC running a real time clock so that you can set it to remind you of anything on almost any time scale from seconds to years. Not only that, but the software is arranged so that you can be reminded about a regular appointment as many times as you like at whatever interval you need. Each reminder can have a few lines of text attached so that you have all the information you need at the time. The alarm goes off via the BBC's speaker but doesn't

COURSES FOR THE BBC & ELECTRON

£10.50

BOOK & TAPE COURSE

Beginners BASIC Courses

These project-based courses guide you step by step through BASIC, developing games and utilities using progressively more complex BASIC commands and structures. All the software developed is provided on tape so you can get a taste of the programs first and then dissect and understand them whilst working along with the detailed explanations given in the book.

As each new command is encountered, it is given a careful explanation and is demonstrated by a short example program.

Soon available for the ELECTRON

£12.50

BOOK & TAPE COURSE

Assembly Language Courses

These courses use well proven Dr Watson formula that has been described by the critics as "Worth its weight in gold". No prior knowledge of assembly language is assumed and the aim is to ensure that every reader really succeeds.

The tape includes:

Disassembler - disassembles code anywhere in memory.

Search Utility - searches for a number or string anywhere in memory - demonstrates the use of Assembly Language.

Binary/BCD/Hexadecimal tutor - this CAL tutor teaches about the various mathematical notations used in machine-code programming.

£9.95

BOOK & TAPE COURSE

BASIC Adventures in Space (age 7 upwards)

This is for the more junior reader and is written as a three part adventure story which teaches the language BASIC. Again, full software is provided on tape. The tape also includes four CAL (Computer Aided Learning) programs, which teach the major BASIC commands and demonstrate a program in use.

This novel approach combines a story that is compulsive reading for the young reader with a carefully structured approach to BASIC intricately interwoven into the text. Also, each BASIC command covered is given a separate, careful explanation in a special 'easy reference' section in the second half of the book.

interrupt anything you are doing on screen until you want a readout.

Besides all this you can have a full clock display anytime you are in Mode 7 on the top line of the screen. The non-volatile RAM is also a very useful tool, in that you can store short but vital programs such as key definitions so that they autoboot each time you switch the power on. The diary can be set to give you messages at this time too.

There is no doubt that this is a very competently designed tool with excellent simple control software. However, I doubt whether it will be fully used by any but the regular business user. For such a person it might make a very efficient, if a little unattractive, personal secretary.

H ★ ★ ★ ★ ★

Acorn add-ons

Acorn also makes a whole range of add-ons for the BBC machine, some of which are rapidly becoming legends in their own right. This is not because they are particularly highly regarded, but because some have never been seen outside an exhibition hall (and some not even inside one!), it would therefore be difficult to review them all and I have decided to just list them with a few notes about each.

Teletext Adaptor £225 This does exist now and has been growing in usefulness as the weeks pass. The 'free' software is developing too but it is still very much aimed at education and not really very useful to the average hobbyist. You must also have a very good aerial system close to the computer.

Speech Synthesis £55 This system gives you 165 words plus all the letters of the alphabet for your money. The quality is excellent, but it is so difficult to make new words that I have now given up completely and sold my system. You may have more patience.

6502 Second Processor £195.50 This is now due for release and is supposed to be on its way to customers. This must be the memory add-on that really works. There is also the 'Bitstik' which gives a very fine CAD system too. Well worth an investigation.

IEEE Interface This is really meant for the control and display of laboratory instruments such as oscilloscopes, voltmeters and frequency meters. I doubt this will find its way into very many homes.

Excet Monitoring Unit (bits and bytes) £99

This is a very accurate and flexible monitoring unit which attaches to the BBC to make it both a measuring and display tool. The measurements it can make are: temperature, resistance, voltages, current, power, time and light — all to an accuracy better than 1%. There is an unlimited choice of scales with autoscaling and axis labelling on graphs. It can display up to six readings simultaneously and has a large character mode for group work.

The software has three display modes: large character single variable, six variables double height and graphs of any two variables against one another. The connection is to the power supply socket and to the analogue port, which could be a problem if you use disc drives but is fine for cassette-based machines. The price includes the instrument, temperature probe, light sensor, three sets of electrical probes, leads and connectors, software on cassette, manual and application notes. In short, everything you are likely to need. This unit does seem to be remarkable value for money.
value for money 95%
L ★ ★ ★ ★ ★

Flip-Strip £1.75

The user defined function key system is a great boon to any one who uses wordprocessors, business programs or even adventure games. That is, until you have a collection of key definition strips and they get all mixed up or lost under TV's, etc. This is where Flip-Strip comes in. It is a set of blank key definition strips spiral bound at the top edge, so all you do is copy or stick the definitions you need on to these blanks and they can never be lost again. You slip the thick outer cover under the perspex on the BBC and then flip the strip to your heart's content. A great idea and well worth the money.
value for money 90%
H ★ ★ ★ ★ ★

GTM's Sound Pick off module £6.95

This is similar in concept to Micro Advent's Microvoc, being a plug-in module for taking the sound output to the back of the machine and providing a volume control at the same time. Fitting is very simple and you can plug your micro into any speaker of your choice. You could even plug it into an amplifier or a tape recorder, as I have done for demonstration purposes.

There are two styles available: one for issue 2 and 3 boards which terminates in a DIN socket; the other for later boards, with a minjack plug. Both are mounted on a colour-matched plate which simply screws on to the machine via one of the fixing holes. They are particularly neat when fitted, as the volume control is so small it does not stick out at all.
value for money 90%
H ★ ★ ★ ★ ★

Late releases (Electron)

Sir Computers ROM Board contact dealer for price

This company has now announced the first ROM board for this machine but unfortunately it was not available for testing before press date. The

board offers the ability to use those ROMs developed for the BBC which don't use those features absent from the Electron. The list so far includes VIEW for word processing, FORTH from HCCS and the Graphics Extension ROM from Computer Concepts. There are distinct indications that there will be ROMs produced for the Electron as the Board becomes more popular. The board can hold up to 12 of the ROMs and all are available 'at the touch of a button.'

Although I haven't seen the device I'm certain that it will become a very popular product as it will allow the Electron to be used for serious software development and word processing.

The other major feature of the board is its ability to hold static RAM. Four of the sockets can be configured in this way so that you can test any machine code routines you are developing without having to write them into EPROMs and then have to be continually erasing them.
value for money 80%
L ★ ★ ★ ★ ★

First Byte's Joystick Interface £24.95

This is one Electron add-on I have actually used, and a very good product it is too. The interface comprises a small cream plastic case with an edge connector to fit the Electron expansion port and a socket for an Atari-type joystick. This seems to me to be a very good design feature since the Atari-type sticks are widely available at a reasonable price.

There is also a joystick driver program supplied with the interface and this has been pre-programmed for about 30 of the currently available Electron games. The software works well and is simplicity itself as I found by playing the games included. If you wish to use the interface with your own software then full instructions on how to do so are also given.

However it is important to note that, unlike the BBC joystick port, this is a switched interface only and therefore only on/off states can be checked. This is unlikely to be a problem as its main use will be with games. I must say that when I used the Quickshot 2 joystick the response was very good indeed. The only reservation I have is that there is only one socket available so it cannot be used for two-player games.
value for money 90%
H ★ ★ ★ ★ ★

Sir Computers Printer/ADC Port contact supplier for price

This device is an interesting synthesis of products aimed at both the serious user and the games player. For the serious user there is the printer facility which, by a clever use of ROM software on the board itself, behaves in exactly the same way as the BBC machine. This means that any program written for the BBC which uses a printer will work, without any modifications, on the Electron. The software also allows full use of the printer control commands such as *FX 5 and *FX 6, enabling any parallel printer which will interface to the BBC to be used on this machine. For games players there is a BBC compatible joystick interface with a full 10 bit analogue input facility. This means that besides simple left/right and up/down movement there is also information about the strength of such available movement.

For programs like design packages this type of information is essential and it also means that such items as digitizers, graphic tablets and other measuring devices may be used too. The driving software is again in a ROM so that all the BBC standard calls are available.
value for money 90%
L ★ ★ ★ ★ ★

Microvoc from Micro Advent £23 (incl p&p)

This product and the one from GTM both improve the sound on the BBC machine. This product comprises a plug-in module to take the BBC sound output to the back of the machine and two spherical speakers to improve the quality and volume available. The whole unit is very simple to fit and requires no soldering whatsoever, thus keeping your guarantee valid. The speakers can be disconnected easily and the volume control will then adjust the volume of the internal speaker.

This is a simple and moderately priced product for those who wish to produce better music from their micros. It comes with a plug for the 1MHz bus to eliminate the buzz on issue 2 and 3 machines.
value for money 70%
L ★ ★ ★ ★ ★

Phi Mag's Phloopy £99 + £26 for interface

Phloopy is a mass storage system designed to bridge the gap between tape recorders disc drives.

Phloopy stores data on tape. A special head records nine tracks side by side on 12 foot of ¼-inch tape. Bytes of data are stored across the tape and the ninth track deals with error checking, using an on-board processor — this means that Phloopy uses less RAM than most disc systems.

Transfer rate is 10K per second, around 200 times faster than cassettes. The Loop Filing System uses the standard BBC filing system, BASIC commands and its own commands, prefixed by an asterisk. The continuous loop of tape is driven at 15 inches per second and touches the cartridge wall only occasionally, so tape lubricant is not needed.

Phloopy plugs into the BBC's disc port and you must cut two resistors (Phi Mag says its engineers will help you if you have problems). The Loop Filing System ROM and a couple of plugs go into the BBC board.

Each cartridge holds up to 100K data and extra cartridges cost £3.75 each + VAT.

Charming TI-99/4A £3.20

SoftTI, 14 Station Rd, Brough,
N. Humberside

Ever fancied yourself as Prince Charming? Well, here's your chance. Wicked Count Bludnok has abducted Princess Softi and you must rescue her.

The game starts in the catacombs, a grid with numbered and lettered axes. You have a limited time to type in co-ordinates to open tombs and find matching pairs of items useful for the rescue. As each item only appears on the screen until another co-ordinate is entered or items matched, quick reactions and good memory are required.

How well you fare determines in which of three chambers you will find the princess. You may, however, wish to forget her and

make for the money — or perhaps both! Various guards and obstacles appear in your path and careful use of items from the catacombs is essential for survival.

Excellent use of the TI's capabilities is made, but during one of many attempts, 'Memory Full' brought the game to an abrupt end.

Feminists, grinding their teeth at such a male chauvinistic theme, will be pleased to learn that there's a version available in which the roles are reversed.

J.W.

Spy's Demise TI-99/4A £8

Challenger, from Stainless Software, 10 Alstone Rd, Stockport, Cheshire SK4 5AH

This game makes a welcome change from others based wholly on manual dexterity. Its theme is typically American: you against the KGB. The documentation leads you into the Ukrainian diplomatic mission in Pyongyang. Ahem. While tipling in the Bangkok Hilton you have discovered that the KGB has the key to a fortune in computer data in the form of an encoded message. Your task is to avoid the spritely guards through the 11 floors of the diplomatic mission, not once but nine times, building up a score and piecing together the message as it is revealed to you.

If you are one of two UK solvers of the code you can win free software.

You use the joystick or the keyboard's s and d keys to control movement, while the guards patrol continuously. You can pause by pressing p or the fire button, but this is very difficult, needing quick mental reactions.

Graphics are quite good, and interest is held very well indeed. Needs Extended BASIC. P.B.

Breakout/ Middle Kingdom Dragon £7.95

Dragon Data, Kenfig Industrial Estate, Margam, Port Talbot, West Glam SA13 2PE

Breakout is a machine code version of the arcade game. You must try to keep the ball in play while knocking out bricks from a descending wall. You can use a joystick or keys to control the bat. There are five skill levels and a high-score chart. A very enjoyable game which loaded with no problems.

The second game is also in machine code and is a graphic adventure game. At the start you choose the skill level and the speed at which messages are to be displayed on the screen.

The object is to return magic rings to the sanctuary to become the ruler of middle kingdom. You must search the catacombs, temple and pyramid before your strength runs out. Many evil beings live here and they must be defeated. Scattered objects will help you in your quest.

The main display is a bird's eye view of the part of the building you are in. Movement is controlled by the arrow keys.

This is a thoroughly enjoyable adventure game. Both games are very entertaining. J.E.M.

Solitaire/ Tower of Hanoi Sord M5 £8.95

Computer Games, CGL House, Goldings Hill, Loughton, Essex IG10 2RR

Two games at £8.95 for the standard Sord M5 with BASIC-I. I wasn't expecting much from these programs as they are written in 4K and when I loaded them I was right. They are very simple games.

Solitaire is the traditional board game where you try and clear as many pieces as you can by jumping over the ones immediately next to them.

Tower of Hanoi is also well known. You've probably seen it published for the more popular micros in magazines. It's the

game in which you move the pyramid-shaped edifice from one position to another, but only one tier can be moved at a time and you can only transfer smaller tiers on top of larger ones.

Both programs were well fool-proofed and I could not crash them. Considering the limitations of BASIC-I, they are quite good and you may find studying these programs more beneficial than reading the rather poorly written BASIC-I manual. In any case I must confess I did enjoy these games and at £8.95 for two, you can't be too critical can you? S.S.

instructions	95%
playability	60%
graphics	30%
value for money	60%

Tumbledown Tower TI-99/4A £5.55

Solway, 6 Curzon St, Maryport, Cumbria CA15 6LL

This is a fairly basic, text only adventure game in which you explore a derelict tower. Although the layout of the rooms and items in them remains the same in every run, it's still good fun to play.

You are given limited stamina to last each game: your stamina drains more rapidly as you collect various artefacts. A strange assortment of monsters is also provided to sap strength whilst wandering around the tower. You are always aggressive to them unless commanded otherwise. Consequently, amusing comments such as "you just killed a poor little bewildered dalek" appear on the screen.

Commands are input as a single letter which means the computer has a vocabulary limited to a few verbs and directions. You have the option to quit at any time, but your score is calculated before the final decision is taken.

The ultimate quest of the adventure is not described in the instructions, but takes little imagination to guess. Then it's just a matter of whether or not you have enough stamina to last the course. J.W.

```

How it works

1-9 REMs
10 colour
25-28 make sure pen does not
leave screen
35 looks for an input
39-900 follow inputs
1000 stores picture in memory
1100 recalls picture

Inverse graphics: 87 F1, 88 F3,
89 F5, 90 F6

This program enables anyone with an unexpanded VIC-20 — with or without joystick — to design and store pictures and patterns.

The keys to use are:

P move pen up
full stop pen down
semi-colon pen right
L pen left
F changes character
M puts picture into memory
R recalls picture
F1 change pen to rubber
F5 change pen to block character
F6 clear screen

The joystick can be used for up, down, left and right commands.

Hints on conversion

Conversion should not be difficult. The DIM in line 20 is for the memory, variable A is the position of the pen, B is the character of the pen, lines 40-90 are inputs from the joystick and are not necessary and all the POKEs less than 1000 are for colour and sound. The PRINT statement in line 15 clears the screen.

This week – it's **Wally Week!**

**Wally Week is here – starring in
Mikro-Gen's great new game**

Automania

Meet Wally Week – the incomparably incompetent hero of Automania. Help him climb the ladders and jump the gaps whilst rebuilding ten cars – and avoiding a hailstorm of nuts and bolts, an avalanche of tyres, and a Tidy Robot which clears everything up – including the car pool Wally is rebuilding. And if you can do it, start again at a harder level – it soon gets very difficult . . .

**Ten screens ★ Superb graphics ★ Great animation!
It's all on Automania, starring Wally Week**

Automania ONLY £6.95

For 48K Spectrum

Just part of Mikro-Gen's great range – look out for Laserwarp (and see if you can win £100 for the month's highest score), Genesis II, Paradroids, Drakmaze, and lots more at Co-op, Boots, WH Smiths, Menzies and other leading retailers, or order direct (plus 40p post & packing) from:

Battle Over Titan TI-99/4A £7.95

Timeless, 3 Bridgend, Fauldhouse, West Lothian, Scotland EH47 9HF

A space war game with a maze thrown in for good measure.

The maze is the pathway through scanner rays emitted by alien spacecraft. As long as you stay on this path you are well protected from their laser fire, and can pick them off with your own phaser cannons.

As you hit each alien, however, the scanner ray emitted is destroyed with it and the maze therefore becomes smaller. You find yourself having to cross areas where the enemy scans are stronger and where you will be hit and destroyed.

Full instructions are printed on screen and there is a choice of keyboard or joystick operation.

There is a speed control for your spaceship and by holding the direction key or joystick in one position the ship will travel faster; this speed may be important when you are crossing the danger zones.

Graphics and colour are used to good effect and the whole programme is very well thought out. Needs Extended BASIC.

Pengon CBM 64 £8

Microdeal, 41 Truro Rd, St Austell, Cornwall PL25 5JE

Pengon reminds me of an arcade game I once played; the principles are the same although there is a big difference in quality.

The program doesn't take very long to load, only a few minutes. No problems were encountered during loading. Just in case you have trouble the tape contains recordings on both sides.

You control a small penguin which can either smash or slide blocks of ice about a grid type screen. Seals are moving around and coming after you. To kill the seals you slide blocks of ice into them.

The graphics aren't very interesting and certainly don't come up to the standards we now expect from software.

The instructions are plentiful and you can't go wrong. There is also a slip of paper in with the cassette which will allow you to join the Cuthbert Club. This would indicate to me that the game is aimed at junior school children.

Titanic games for you to grapple with

Get to grips with giant-sized tasks in these games. Conquer the cosmos, solve the mysteries of the zodiac and save the Roman empire!

Bongo VIC-20 + 16K £7.95

Anirog, 29 West Hill, Dartford, Kent

This is a really outstanding game.

The scenario is not new and is based on the ladder and platform concept. Where it wins is in graphics, execution and addictiveness.

The hero, under your control, is a supermouse called Bongo (it actually looks like a puppy but who cares?) You must collect diamonds distributed around the platforms so that you can win the heart of the princess. The platforms are linked by ladders, trampolines, slides and teleporters.

The platforms are also occupied by mean looking rats who, if they catch you, will dump you in the river at the bottom of the screen. Clear the screen and you go on to the next one. You can pick up bonus points by catching letters floating about the screen.

Graphically the game is probably nearly as good as is possible on the VIC. An expanded screen is used and the characters are animated pseudo-sprites built up from several redefined characters. The animation is very nice and smooth. The sound is poor but the graphics save the day.

Overall a beauty of a tricky game. The rats are particularly crafty and tough to avoid. A.W.

Zodiac CBM 64 £7.95

Anirog, 29 West Hill, Dartford, Kent

Your task is to unravel the mysteries of the zodiac. Demons are out to get you and you must kill them to collect the 12 signs of the zodiac.

You move between rooms (each screen being one room or corridor) using the joystick. If you can see any demons then you must shoot them and go on to collect the sign of the zodiac if there is one.

Every so often there will be a gate opening when you receive an extra life. To make the game harder the demons keep multiplying, taking away your extra lives.

The graphics are quite good although the background screens

are very similar and repetitive. Obvious shortcuts have been made in the graphics, making the quality slightly less than it should be.

Sound is good and very suitable. The program makes up in sound for what it lacks in graphics.

I found a bug in the game which happened about four times. When moving out of some corridors you appear in the wrong place on the screen and lose a life.

The Fall of Rome Spectrum £6.99

Argus Press Software, No. 1 Golden Square, London W1R 3AB

Can you imagine yourself as the saviour of the ancient Roman empire, circa 395 AD?

In this game of strategy and tactics you get ample opportunity to steer the ancient Romans to victory — or defeat. By ample opportunity I mean that the game takes place over 60 years, sectioned into five-year periods of three phases.

One phase gives you a chance to deploy your forces throughout the provinces, and during this phase a map of ancient Europe is frequently displayed and constantly updated.

Your forces consist of mobile and static legions, cavalry and auxiliaries, which cost money to raise and maintain. Another phase is concerned with the movement of your wealth and the third phase is the combat. The inlay card contains a wealth of information, and you just follow the prompts on the screen.

I am not a fan of strategy games, but I must admit that this game made a refreshing change from shooting aliens.

Si vis pacem, para bellum, sic transit gloria mundi!

What will you risk on the roll of the dice?

Yahtzee is a traditional dice game for one to six players in which each rolls five dice to try and achieve the combination shown on the score card.

After the first roll of the dice you have two chances to re-roll any of them. After your third roll you have to select the score option. If the dice are correct for that option you will be given a score; if not you get zero.

How it works

- 10-25 set up variables, initialise strings and arrays
- 35-65 transfer character set from ROM to RAM and re-define characters
- 75-180 sets up score card
- 200-210 name routine
- 220 move dice to top of screen
- 230-275 roll dice
- 300-350 title and instructions
- 353-370 request number of players, call name routine for each
- 380-425 main game loop (382 re-sets dice to start)
- 430-465 check selection
- 500-623 checking routines to examine choice and give score
- 535-550 sort dice into value order in memory to make checking easier
- 625 score routine
- 700 end routine
- 800 sound routine

You cannot select the same option twice and the game ends when the last player has made his thirteenth selection.

The dice are redefined characters which are placed in a string so that they move together.

If any of the dice are to be rolled again they are sent back to the top of the screen. Before

they are rolled again the string is checked for blank spaces and the "roll" strings have blanks placed in the correct positions.

When a turn is complete the final roll of the dice is sorted out into numerical order and each of the dice is given a numerical name. It is then a lot simpler to check for score options. Checking values are incorporated so that you cannot choose the same option twice.

The scores for each player are held in an array and are displayed as each player starts a turn.

Apart from the character set movement, the game is all in BASIC and is an exercise in string handling.

It's also an enjoyable game!

Note: Italics in line 45 should be entered in inverse.

Variables

- MVCHRS machine code string to move character set from ROM to RAM
- SS holds dice in start position
- R1S, R2S, R3S hold dice in roll positions
- RFS holds dice in its final position
- NS names string — holds up to six 10-letter names
- NIS individual names — parts of NS
- BLS blanking string
- SC(6,19) score array for up to six players
- AS, BS are used in sorting dice into order

An ancient dice game by Peter Burnett. It runs on 16K or 48K Ataris

Tale of woe

Being one of those millions of Dads who are harassed into buying a computer for their children, I felt I must write and tell you this sad story.

I purchased a Commodore 64 at the end of February 1984 from Dixons. When I unpacked it the upper and lower casing were loose and you could see inside the computer. Of course it would not work.

Next day Dixons changed the computer and cassette deck for me. When I got it home, it worked and I typed in a program. The next day the CBM 64 packed up completely.

A few days later I was on to my third computer. I wrote to Commodore but had no reply. The third model worked for a few weeks off and on. At the end of March I phoned Commodore and was told the head was probably out on the cassette, and they offered to repair it. I paid out the postage to send it back, enclosing a letter asking for an explanation and recompense for my inconvenience.

A week later the cassette deck arrived back from Commodore, with my letter which had been opened but not answered.

Needless to say I was not amused so I called Commodore. They considered they had done their bit by repairing the cassette deck and that was the end of the matter. By then I had decided enough was enough and returned everything to Dixons, who gave me credit. I must add that Dixons have been very good and most helpful.

I now have a Sharp MZ700 which has behaved impeccably.

Thank you for letting me air my pent-up frustrations.
J. Anderton, Ashby-de-la-Zouch, Leics

Marvellous Memotech

Having started computing on a ZX81, I upgraded to a Spectrum and then had the intention of further upgrading to the QL. However, not wanting to be at the end of a four-month queue I decided to change to another manufacturer (with whom I had had some experience due to its high quality add-ons for the ZX81). I therefore purchased the MTX 512.

As a point to note for all of you awaiting the QL, I posted my order for the MTX on a Monday and on the Wednesday of the same week I had it plugged in and running.

If you are still shopping around for a machine I would certainly recommend the Memotech series. Built in assembler/disassembler, four-channel sound, 16K video RAM and 32 sprites are only a few of its good points.

S. Drakeford, Rubery, Birmingham

Whoops!

Two lines in the Little Professor program for the Commodore 64, published in HCW 62, reproduced poorly in some copies. The two lines are:

90 IFRP = 10THENPOKE
1972,32:POKE1974,32:
POKE1975,32:POKE
1977,32

92 IFRP = 20THENPOKE
1972,49:POKE1974,20:
POKE1975,15:POKE
1977,57:RP = 0

Autochar File for the TI-99/4A, reviewed in HCW 62, page 26, is available from Christine Computing, 6 Florence Close, Watford, Herts WD2 6AS.

I'm back in control

The debate about the morality and legality of tape copying continues. The points made against tapes designed specifically for copying other people's work are justified and reasonable.

There are other important issues, however, the most important being the rights that we have over our own computers.

Like many others, I purchase commercial software, not just for games appeal, but because of the quality of programming. I realise why software writers include routines to prevent illegal copying. But many interested computer owners find the inability to examine, modify or simply learn from software very frustrating.

Computer owners want to inquire into and customise programs, and thus expand their knowledge of their machines, adding to their own enjoyment.

I recently purchased a program which, among other features, incorporates a routine which puts me

back in full control of my Spectrum. It allows me to stop BASIC or machine code programs without them crashing. I can now learn from my purchases without getting a black screen or a system nervous breakdown. I can utilise all my computer's functions.

I sympathise with software houses regarding illegal copying, but I would question the right of any person to dictate that certain of the keys on my computer must remain inactive, or even "lethal", when I use tapes I have purchased.

I will not be using the program to make illegal copies just because the SAVE option is now open to me. It is apparent that it was not designed for such a use.

I don't defend any software designed merely to copy programs, but I would defend very useful utility programs, like the one I bought, which re-instate my rights over my computer, and allow me to learn, not just play.

Sink the pirates, but splice the mainbrace for innovative programs which restore the rights of the computer user.

C.C. Mole, Burntwood, Staffs

We have edited this letter to remove the name of the utility program to which Mr Mole refers — some people are not as honest as he is and HCW does not want to encourage illegal copying. This does not mean we approve of all of the actions of software houses! We just don't approve of theft...

Thanks to all

I would like to thank HCW and the readers who offered help through your Letters page.

My Oric computer was unfortunately lost by the shop from which I purchased it. I eventually got most of the money back. I agree with D. Howard and J. M. Stubbins that the Oric is a powerful computer. To demonstrate my faith in the machine I immediately purchased another.

I would like to apologise to Oric International. The reason for the hold-up was not entirely their fault.

When are we going to see all this educational software promised?

Once again, many thanks to HCW for its computer

surgery, at a reasonable price.

J. M. Hopkins, Frome, Somerset

Oric open letter

Could I use your Letters page to ask Oric Products to solve my problem?

In January this year I returned my Oric-1 for repair. I received back a replacement Oric-1. The problem is that it will not load programs reliably.

I have written to Oric Products twice and all I have received is an offer of an Atmos upgrade. Undeterred, I sent a recorded delivery letter, and in reply I have just received another offer for an Atmos upgrade!

V.R.J. Wiacek, Amersham, Bucks

Any old TI mags?

Firstly, many thanks for supporting the TI-99/4A. I find HCW a VFM (value for money) magazine with interesting comments in your readers' letters.

I hope you will print many more TI-99/4A programs in the future. I have had my TI for one month. It took me a long time to save the money, as I am unemployed.

I wondered if any of your readers have any unwanted magazines for the TI-99/4A which I would find very useful. I would be most grateful if they could send me any old copies.

Many thanks for your help; keep up the good work.

W. Fairbairn, 5 Dumbarton Rd, Fort William, Inverness-shire PH33 6UU

Amstrad info 1

I am writing to you about the new Amstrad micro. Could you give me the address for information on software and peripherals?
Carl Wheatley, Monmouth, Gwent

The Amstrad CPC 464 computers use an extended Microsoft-like BASIC written by Locomotive Software. BASIC keywords are typed in letter for letter, but some can also be abbreviated. An example is the question mark for PRINT.

More details about the computers and peripherals

can be had from Amstrad Consumer Electronics, Brentwood House, 169 Kings Road, Brentwood, Essex CM14 4EF. The company's software arm, Amsoft, is at the same address.

Amstrad info 2

I read the article about the Amstrad computer (HCW 58) and wanted more information about this micro.

I was thinking about buying a Spectrum, but I was put off by the keywords written on the keys. I want something where you type in the word, and then it appears on the screen.

I would be very grateful for your help.

Leslie Mansock, Radford, Notts

Castle query

I am writing to thank you for producing an excellent magazine. I find your support for the Electron very encouraging, both reviews and listings.

Please can anyone help me? What do you do when you are in the castle in Quest for the Holy Grail, by Epic? I can get as far as the castle but I'm at a complete loss as to how to get out.

Richard Rennie, West Calder, West Lothian

Send your letters to Letters, Home Computing Weekly, No.1GoldenSquare, London W1R 3AB. Don't forget to name your computer — the best letter could win £5-worth of software. Got a problem with your micro? We'll soon be starting a queries page, so send your technical questions to Queries at the above address.

Take over the board before your opponent

Use your skill and strategy to cover the screen in your own colour in this board game from Dave Martin for the unexpanded TI-99/4A

Hints on conversion

TI BASIC is fairly standard with two main exceptions. Single statement lines are used and subroutines for graphics and sound are available, prefixed with CALL, as detailed below.

CALL CLEAR clears screen

CALL SCREEN defines screen colour

CALL CHAR defines a character with a 16-digit hex string from an eight by eight grid. Other machines will use a different method

CALL COLOUR (character set, foreground, background) sets colour of character

CALL HCHAR (row, column, character code, number of repeats) places character on screen at co-ordinates specified and optionally repeats character horizontally

CALL VCHAR similar to HCHAR but repeats character vertically

CALL GCHAR (row, column, variable) similar to a screen PEEK on other machines. Gives the ASCII code at the given screen co-ordinates

CALL SOUND (D,F,V) gives sound of duration D, frequency F and volume V. Three sounds can be produced at once

This is a game of strategy for two players, the object being to win as many squares on an 8 x 8 grid as possible, the one gaining the most being the winner.

Each player starts with two squares in the centre of the grid. To play you have to trap opposition squares between the square you are adding to the grid and one of your existing squares, horizontally, vertically or diagonally (it is only a valid move if you do so). The trapped squares then become yours and change to your colour.

You play the game like this: First select the column number (1-9), the column number flashes, then the row (A-H).

If the square is already occupied then nothing happens and it is still your turn.

If it is an invalid move then the selected square is displayed

How it works

- 100-320 define graphics
- 330-420 set up frame
- 430-520 number frame
- 530-780 set up start
- 790-1040 select square
- 1050-1510 check for trapped squares
- 1520 detects invalid move
- 1530-1560 changes over squares
- 1570-1630 changes over scoring variables
- 1640 detects end of game
- 1650-1680 changes over scoring variables
- 1690-1800 displays squares and scores
- 1810-1880 end of game sub-routine
- 1890-1990 removes invalid move
- 2000-2170 running score sub-routine

and then erased and it is still your turn.

Either of these conditions can be used to cancel an incorrect column choice.

If it is a valid move then the trapped squares are changed to your colour, the running score is updated and the 'turn' indicator changes to the opposition colour and it is his turn.

The game is finished when the grid is full. If a player cannot go then he must press 'N' which changes the colour of the 'turn' indicator and it is then his opponents turn.

Variables

- A,B,AA used to change over squares
- BAD used to detect invalid move
- NG number of goes
- R row number
- C column number
- RR old row number
- CC old column number
- NR & NC used in detecting trapped squares
- SQUARES count of trapped squares
- NOTE tone played when squares changed
- NUM used in flashing column number subroutine
- GAIN,LOSS,RED,WHITE used in scoring
- GAINC used in changing over scoring to next player
- RED1,RED2,WHITE1,WHITE2 used in running score display

ZX Draughts 48K Spectrum £5.95

CP Software, 2 Glebe Road, Uxbridge, Middlesex

Draughts is a game that has weathered the ravages of time, and is still very popular, although what you would make of a partner who takes 14 minutes for a move is anybody's guess. That is roughly the time taken by the computer at level 9, although, to be fair, the response time at the lowest levels is very much quicker. The very long delay is a result of the 'full capture' search option, or so it says in the advertisement. With less than thirty-two squares to search through it makes me wonder what the computer gets up to for 14 minutes.

Nevertheless, you do get a very good game, even at lower levels of play. With only the level, and 'capture search' options, and no choice of even board and piece colours, you get the feeling that you are not getting much for your money.

If you like draughts then this is as good a game as any I've seen, even if it is a bit overpriced **B.B.**

Buriabeast 48K Spectrum £5.95

Kerian, 29 Gisburn Rd, Hessle, Hull HU13 9HZ

This program lives up to its insert blurb of being an exciting game. I found it addictive. You are the last person left on Earth who can defend it against the marauding hordes of mutant Kens with only one tool — a shovel.

There are five levels with nine ladders. Your task is to run up and down ladders, digging holes for the green aliens to fall through and turn red. Next, you have to lure them into falling through a second hole to become larger, white super mutants.

The insert states there are 13 levels — but I'm afraid my co-ordination with the seven control

keys is obviously so poor that I failed to leave screen one — even when all three aliens became the highest mutant form.

Isn't it possible to replay without having to go back to the title screen? So much time is needlessly wasted. When do points start to appear at screen top, and why is there no hall of fame? The program often crashed, producing martian-style graphics, but even so, it is one to be recommended. **T.W.**

Backgammon 48K Spectrum £5.95

CP Software, 2 Glebe Road, Uxbridge, Middx

Now here is a game I have never played, so I was looking forward to having a go, especially as it is described as a version particularly suited to beginners. That may be so, because I soon got into the game and rather enjoyed playing, although you can only play against the computer, which is a pity.

A friend of mine tells me that this is not quite the correct game because there is something called a double dice option missing from this version. He showed me the game as written for the Spectrum by another firm, and there was a difference. Whether this would deter the serious player from playing this version I couldn't say.

Seeing the two versions enabled me to compare the two displays, and this version, in my opinion, has a more pleasing display, although it is slower in setting up the board. Bearing in mind the differences mentioned I will leave it to your judgement as to whether you would like to play this simplified version or not.

B.B.

Pick of the week

Something for everyone in this mixed bag of goodies. Our reviewers have checked them over for you — here are the results

Reversi 48K Spectrum £6.96

CP Software, 2 Glebe Road, Uxbridge, Middx

Alas, poor Reversi, I know it well, even by another name. This well known board game is claimed by the vendors to be the strongest game of Spectrum Reversi on the market.

There is one feature of this version I have never seen before, and that is a system of handicapping by giving or taking any or all of the corners. I'm not sure this is in the rules of the game, but it does make for variety. You may, if you wish, change the colours of the display.

A constant display of scores and history of moves is there on

the screen, which is handy. Watching the computer play itself can be fascinating, and you have the option of player versus player or player versus computer. If you choose to play the computer you will be given a good game at any level, though I suspect that at the higher levels you will be tempted to penalise the computer by giving yourself four corners' start.

Not a bad game, but there is nothing special about this version, certainly not enough to warrant the high price. **B.B.**

Knight Driver 48K Spectrum £5.95

Hewson Consultants, Hewson House, 56b Milton Trading Estate, Abingdon, Oxon OX10 0EL

We are invited to race a car around a circuit in this colourful program from Hewson. There are two levels, professional and learner with automatic option, in which the computer drives. At professional level you have five lives, one being lost each time you veer off the road, while learner mode just limits running time.

The loading screen graphically explains which four keys control speed and direction. Screen bottom visually displays fuel use; screen left is the car on the circuit and screen right repeats the control instructions. Twisty roads take us through countryside, woodland and urban areas.

Although the computer makes it look simple, even at the learner level it is extremely hard to keep the car on the tortuous, narrow roads. Points are scored each time a section is passed without incident. At the end a lengthy report prolongs the replay time.

In the professional mode fuel display is replaced by five cars displaying lives. The controls are less responsive but scoring is higher.

Pity there is no hall of fame and it takes so long to replay. **T.W.**
